DIGITIZATION AS A TOOL FOR REBUILDING UKRAINE'S ECONOMY IN THE POSTWAR PERIOD

Summary. This study is devoted to the role of digital technologies in restoring the economic potential of Ukraine after the unprovoked Russian military aggression against Ukraine. As a result of Russia's aggression, Ukraine is facing huge losses estimated at over trillions of dollars. The attack affected various sectors of the economy, led to the shutdown of numerous enterprises and the destruction of infrastructure. Large-scale mining of the territory led to serious damage to the natural environment. The recovery of the country requires great resources and the joint efforts of government agencies, local authorities, businesses and the public. It is important to use modern technologies for effective reconstruction of the country and regions. It was found that the use of digital tools in various spheres of life and business, such as medicine, education and the military-technical industry, turns out to be a key factor for the effective recovery of the country. In the field of medicine, digital technologies allow faster and more accurate diagnosis and treatment of diseases, ensuring a high standard of medical care. In education, digital tools contribute to the accessibility of learning by enabling distance education and the development of online resources. In the military-technical sphere, the use of modern technologies helps to increase the efficiency and security of the country's defense. These digital innovations not only contribute to post-conflict recovery, but also open up new opportunities for development. They enable faster decision-making, increasing overall productivity and helping to reduce the time needed to rebuild economies and social structures. Such a positive impact of digital tools on the recovery of the country becomes a key factor in creating a sustainable and innovative society. Aspects of financial support and international cooperation in this process. It is argued that it is necessary to create an open and favorable environment for digital transformation, taking into account the importance of regulating information technologies and solving security issues in conditions of military conflict and cyber threats.

Keywords: digitization, economic reconstruction, Ukraine, military aggression, recovery after the war, medical digitalization, educational digitalization, military-tech industry, financial support, international cooperation, innovative technologies, cyber security, information technologies.

Постановка проблеми. З використанням цифрових технологій змінюється повсякденне життя людини, виробничі відносини, структура економіки та освіта, а також виникають нові вимоги до комунікацій, інформаційних систем та сервісів. В даний час дані стають новим активом, причому головним чиним за рахунок

їхньої альтернативної цінності: вони застосовуються в нових цілях і використовуються для реалізації нових ідей. Важливо, що значні форми організації суспільства та розвитку економіки змінюються. Глобальні ринки зазнають значних змін під впливом цифровізації. Традиційна індустрія втрачає свою значущість у структурі світо-
