Lord Kelvin And The Age Of The Earth:

Lord Kelvin and the Age of the Earth Joe D. Burchfield, 2009-05-11 Burchfield charts the enormous impact made by Lord Kelvin's application of thermodynamic laws to the question of the earth's age and the heated debate his ideas sparked among British Victorian physicists, astronomers, geologists, and biologists. Anyone interested in geologic time and that should include all geologists and a fair smattering of biologists, physicists, and chemists should make Burchfield's commendable and time-tested volume part of their personal library. Kelvin, Thermodynamics and the Natural World M.W. Collins, R.C. Dougal, C. Koenig, I. Ruddock, Strathclyde University, UK, 2015-12-14 This volume looks afresh at the life and works of Lord Kelvin including his standing and relationships with Charles Darwin, T.S. Huxley, and the X Club, thereby throwing new light on the nineteenth-century conflict between the British energy and biology specialists. It focuses on two principal issues. Firstly, there is the contribution made by Kelvin to the formulation of the Laws of Thermodynamics, both personal and in the content of the scientific communications exchanged with other workers such as Joule and Clausius. Secondly, there is Kelvin's impact on the wider field of science such as thermoelectricity and geology, determination of the age of the earth. Of late, a number of studies and initiatives including the Centenary celebrations of Kelvin's death and exhibits such as that of the Revolutionary Scientist in the Hunterian Museum, Glasgow, have been undertaken, aiding the redefinition of Kelvin's greatness and achievements. The book also raises awareness to improve our approach to the teaching of elementary thermodynamics by attempting to empathise with Kelvin's perspective. It is completed by a full biography, overviews of various monuments to his memory, and short stories in pictures on the Atlantic cable, Maxwell's Demon, the universities associated with the development of thermodynamics, and the Royal Society of Edinburgh. Scientists and engineers with an interest in thermodynamics and anyone interested in the work of Lord Kelvin will find benefit in *Kelvin: Thermodynamics and the Natural World*.

The Life of William Thomson, Baron Kelvin of Largs Silvanus Phillips Thompson, 1910

The Spark of Life Christopher Wills, Jeffrey Bada, 2001 The authors examine the enduring mysteries surrounding life's origin: did life arise on Earth or on some other planet? What did the earliest primitive organisms look like? Were they based on RNA, DNA, or on something we would hardly recognize today? They explore the latest research in fields ranging from molecular biology to astronomy on questions surrounding life's origins.

Pilkey, Linda Pilkey-Jarvis, 2007 Writing for the general nonmathematician reader and using examples from throughout the environmental sciences Orrin Pilkey and Linda Pilkey Jarvis show how unquestioned faith in mathematical models can blind us to the hard data and sound judgment of experienced scientific fieldwork They begin with the extinction of the North Atlantic cod on the Grand Banks of Canada and then they discuss the limitations of many models across a broad array of crucial environmental subjects Case studies depict how the seductiveness of quantitative models has led to unmanageable nuclear waste disposal practices poisoned mining sites unjustifiable faith in predicted sea level rise rates bad predictions of future shoreline erosion rates overoptimistic cost estimates of artificial beaches and a host of other problems The authors demonstrate how many modelers have been reckless employing fudge factors to assure correct answers and caring little if their models actually worked
