People And Computers Proceedings Of The Hci94 Conference:

People and Computers XII Harold Thimbleby, Brid O'Connell, Peter J. Thomas, 2013-03-14 Most organisations try to protect their systems from unauthorised access usually through passwords. Considerable resources are spent designing secure authentication mechanisms but the number of security breaches and problems is still increasing. DeAlvarez 1990, Gordon 1995, Hitchings 1995. Unauthorised access to systems and resulting theft of information or misuse of the system is usually due to hackers cracking user passwords or obtaining them through social engineering. System security, unlike other fields of system development, has to date been regarded as an entirely technical issue. Little research has been done on usability or human factors related to use of security mechanisms. Hitchings 1995 concludes that this narrow perspective has produced security mechanisms which are much less effective than they are generally thought to be. Davis Price 1987 points out that since security is designed, implemented, used and breached by people, human factors should be considered in the design of security mechanisms. It seems that currently hackers pay more attention to human factors than security designers do. The technique of social engineering for instance, obtaining passwords by deception and persuasion, exploits users' lack of security awareness. Hitchings 1995 also suggests that organisational factors ought to be considered when assessing security systems. The aim of the study described in this paper was to identify usability and organisational factors which affect the use of passwords. The following section provides a brief overview of authentication systems along with usability and organisational issues which have been identified to date. 1 *People and Computers IX* Gilbert Cockton, Stephen W. This volume contains refereed papers and reports from the 1994 meeting. Both research and commercial perspectives are considered, making the book essential for all researchers, designers and manufacturers who need to keep abreast of developments in HCI.

Disciplines including Human Computer Interaction. HCI consists of knowledge

supporting practices which solve general problems Long Dowell 1989 A discipline thus requires knowledge to be acquired which can be applied by practitioners to solve problems within the scope of the discipline In the case of HCI such knowledge is being acquired through research and less formally through the description of successful system development practice Some have argued that knowledge is further embodied in the artefacts HCI knowledge is applied to solve user interface design problems Such application is facilitated if the knowledge is expressed in a conception which makes explicit the design problems of practitioners A conception has been proposed by Dowell Long 1989 The conception provides a framework within which to reason about the implications of designs for system performance The framework is concordant with the trend towards design discernible in recent HCI research It is further compatible with notions of top down design fundamental to software engineering practice 2 Teaching and the HCI Research and Development Gap 2 1 An Assessment of Current HCI Education Teaching is one means by which practitioners learn to specify discipline problems It is also a means by which they acquire knowledge to enable the problems to be solved

Human-Computer Interaction Steve Howard, Judy

Hammond, Gitte Lindgaard, 2013-06-05 The theme of the 1997 INTERACT conference Discovering New Worlds of HCI signals major changes that are taking place with the expansion of new technologies into fresh areas of work and leisure throughout the world and new pervasive powerful systems based on multimedia and the internet HCI has a vital role to play in these new worlds to ensure that people using the new technologies are empowered rather than subjugated to the technology that they increasingly have to use In addition outcomes from HCI research studies over the past 20 years are now finding their way into many organisations and helping to improve and enhance work practices These factors have strongly influenced the INTERACT 97 Committee when creating the conference programme with the result that besides the more traditional HCI research and education focus found in previous INTERACT conferences one strand of the 1997 conference has been devoted to industry and another to multimedia The growth in the IFIP TC13 committee itself reflects the expansion of HCI into new worlds Membership of IFIP TC13 has risen to now include representatives of 24 IFIP member country societies from many parts of the world In 1997 IFIP TC13 breaks new ground by holding its sixth INTERACT conference in the Asia Pacific region This is a significant departure from previous INTERACT conferences that were all held in Europe and is especially important for the Asia Pacific region as HCI expands beyond its traditional base

Advances in Human Computer Interaction

Shane Pinder, 2008-10-01 In these 34 chapters we survey the broad disciplines that loosely inhabit the study and practice of human computer interaction Our authors are passionate advocates of innovative applications novel approaches and modern advances in this exciting and developing field It is our wish that the reader consider not only what our authors have written and the experimentation they have described but also the examples they have set

A Methodology for Developing Multimodal User Interfaces of Information Systems Adrian Stanculescu, 2008 The Graphical User Interface GUI as the most prevailing type of User Interface UI in today's interactive applications restricts the interaction with a computer to the visual

modality and is therefore not suited for some users e.g. with limited literacy or typing skills in some circumstances e.g. while moving around with their hands or eyes busy or when the environment is constrained e.g. the keyboard and the mouse are not available. In order to go beyond the GUI constraints the Multimodal MM UIs appear as a paradigm that provides users with great expressive power, naturalness and flexibility. In this thesis we argue that developing MM UIs combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models, a method manipulating these models and the tools implementing the method. Therefore we define a design space based method that is supported by model to model colored transformations in order to obtain MM UIs of information systems. The design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort. The feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage. In addition, an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions.

Design of Speech-based Devices Ian Pitt, Alistair

Edwards, 2012-12-06. Developments in technology have made it possible for speech output to be used in place of the more usual visual interface in both domestic and commercial devices. Speech can be used in situations where visual attention is occupied such as when driving a car or where a task is complex and traditional visual interfaces are not effective such as programming a video recorder. Speech can also be employed in specialist adaptations for visually impaired people. However, the use of speech has not been universally successful, possibly because the speech interaction is poorly designed. Speech is fundamentally different from text and a lot of the problems may arise due to simplified text-to-speech conversion. Design of Speech-based Devices considers the problems associated with speech interaction and offers practical solutions.

This book provides one of the best currently available overviews of human-computer interaction across different cultures, disciplines and countries. It contains the selected proceedings of Interact 95, the Fifth International Conference on Human-Computer Interaction arranged by the International Federation for Information Processing and held in Lillehammer, Norway, in June.

1995 User Interface Design Larry E. Wood, 2018-05-04 Although numerous sources document aspects of user centered design there are few references that consider how a designer transforms the information gathered about users and their work into an effective user interface design This book explains just how designers bridge that gap A group of leading experts in GUI design describe their methods in the context of specific design projects and while the projects processes and methods vary considerably the common theme is building a bridge between user requirements and user interface design **Design, Specification and Verification of Interactive Systems '97** Michael D. Harrison, Juan C. Torres, 2012-12-06 An increasing recognition of the role of the human system interface is leading to new extensions and styles of specification Techniques are being developed that facilitate the expression of user oriented requirements and the refinement and checking of specifications of interactive systems This book reflects the state of the art in this important area and also contains a summary of working group discussions about how the various techniques represented might be applied to a common case study

IUI ... Conference Proceedings , 2000 **Requirements Engineering** Linda A. Macaulay, 2012-12-06 This book has two audiences the practising Requirements Engineer and the advanced student of software engineering or computer science The book is unique because it introduces latest research results and at the same time presents highly practical and useful techniques This book is complementary to texts on software requirements and system Requirements Engineering because of its focus on the problems caused by the fact that Requirements Engineering involves people Throughout this book the author has sought to introduce the reader to a number of techniques which have not previously been included within mainstream computer science literature The techniques chosen have been shown to work in practice in both commercial and research projects The appendices contain step by step guides to particular techniques sufficient detail is provided for readers to try the techniques for themselves The problem faced by the Requirements Engineer is complex it concerns meeting the needs of the customer and at the same time meeting the needs of the designer **Technologies for E-Learning and Digital**
