Radar Systems Paul A. Lynn, 2012-12-06 The rapid development of electronics and its engineering

applications ensures that new topics are always competing for a place in university and polytechnic courses. But it is often difficult for lecturers to find suitable books for recommendation to students particularly when a topic is covered by a short lecture module or as an option. Macmillan New Electronics offers introductions to advanced topics. The level is generally that of second and subsequent years of undergraduate courses in electronic and electrical engineering, computer science and physics. Some of the authors will paint with a broad brush; others will concentrate on a narrower topic and cover it in greater detail. But in all cases the titles in the Series will provide a sound basis for further reading of the specialist literature and an up to date appreciation of practical applications and likely trends. The level, scope and approach of the Series should also appeal to practising engineers and scientists encountering an area of electronics for the first time or needing a rapid and authoritative update.

vii Preface

The basic principles of radar do not change but the design and technology of practical radar systems have developed rapidly in recent years. Advances in digital electronics and computing are having a major impact especially in radar signal processing and display. I hope that this book will prove a useful introduction to such developments as well as to the underlying principles of radar detection.

Adaptive Radar Signal Processing Simon Haykin, 2007 This collaborative work presents the results of over twenty years of pioneering research by Professor Simon Haykin and his colleagues dealing with the use of adaptive radar signal processing to account for the nonstationary nature of the environment. These results have profound implications for defense related signal processing and remote sensing. References are provided in each chapter guiding the reader to the original research on which this book is based.

Aspects of Radar Signal Processing Bernard L. Lewis, Frank F. Kretschmer, Jr., Wesley W. Shelton, 1986-01-01

Time-frequency Transforms for Radar Imaging and Signal Analysis Victor C. Chen, Hao Ling, 2002 This text explores more efficient ways to extract dispersive scattering features, detect and extract weak signals in noise, form clear radar images, estimate parameters and perform motion compensation and detect and track moving targets in the synthetic aperture radar.

Digital Signal Processing Techniques and Applications in Radar Image Processing Bu-Chin Wang, 2008-08-20 A self contained approach to DSP techniques and applications in radar imaging. The processing of radar images in general consists of three major fields: Digital Signal Processing, DSP antenna and radar operation and algorithms used to process the radar images. This book brings together material from these different areas to allow readers to gain a thorough understanding of how radar images are processed. The book is divided into three main parts and covers DSP principles and signal characteristics in both analog and digital domains, advanced signal sampling and interpolation techniques, Antenna theory, Maxwell equation, radiation field from dipole and linear phased array, radar fundamentals, radar modulation and target detection techniques, continuous wave, pulsed, Linear Frequency Modulation and stepped Frequency Modulation. Properties of radar images, algorithms used for radar image processing, simulation examples and results of satellite image files processed by Range Doppler and Stolt interpolation algorithms. The book fully utilizes the computing and graphical capability of

MATLAB to display the signals at various processing stages in 3D and or cross sectional views Additionally the text is complemented with flowcharts and system block diagrams to aid in readers comprehension Digital Signal Processing Techniques and Applications in Radar Image Processing serves as an ideal textbook for graduate students and practicing engineers who wish to gain firsthand experience in applying DSP principles and technologies to radar imaging
