Cardiovascular Toxicities of Breast Cancer Treatment: Emerging Issues in Cardio-Oncology Sharad Goyal,Bruce George Haffty,2016-05-20 Cancer and cardiovascular disease CVD are the two most common causes of mortality and morbidity worldwide The incidence of both cancer and cardiovascular disease increases with age With increased life expectancy the burden of both these diseases will increase substantially in coming years Patients with CVD share multiple common risk factors and lifestyle behaviors in addition to frequently suffering from multiple comorbid conditions Tobacco use hypertension high cholesterol diabetes physical inactivity and poor nutrition are all established risk factors of heart disease Patients with diseases such as breast cancer may develop CVD from treatment such as use of chemotherapy and RT Effects on the heart are a potentially significant and serious clinical problem in radiation therapy treatment of breast cancer Over the course of the past 50 years there have been great advances in the delivery of RT due to the development of new techniques beam energy improvement in imaging modalities and development of image registration strategies It is hypothesized that cardiac damage from RT is correlated to the dose absorbed by the heart and differs between left and right breast radiotherapy The damage to cardiac micro and macro vasculature is the pathophysiological cause of RT related heart disease Given the growing clinical relevance of cardio oncology this Frontiers in Oncology Research Topic provides a venue for disseminating focused reviews and cutting edge research in this quickly growing field We encourage submission of original papers and reviews dealing with cardiac toxicity after breast cancer treatment motion management to reduce cardiac exposure imaging to evaluate potential cardiac toxicities and primary prevention of cardiac disease in the breast cancer patient Women in radiation oncology: 2021 Christina Tsien,Radka Stoyanova,Alina Mihaela Mihai,2023-04-12

Role of SRS/SBRT in Oligometastatic Disease Michael T. Milano,Dwight E. Heron,Alina Mihaela Mihai,2020-02-13 Oligometastatic disease represents an intermediate state between the early localized disease and widespread metastatic malignancy Some patients with oligometastatic disease treated by ablative therapies to all sites of metastatic disease can achieve long disease free survival and sometimes cure Stereotactic radiosurgery SRS and stereotactic body radiation therapy SBRT are accepted treatment options for these patients achieving high rates of local control While most of the studies report

outcomes of SBRT for solitary oligometastasis patients with oligometastatic disease might present with multiple concurrent lesions either in the same organ or in neighboring organs There are few studies addressing the role of SBRT in patients with multiple concurrent oligometastases Furthermore these patients likely recur either in the same organ or at distance Therefore the need for retreatment with SBRT might be required There remains a dearth of data regarding the re irradiation after prior SBRT toxicity and dose volume constraints Particularly as it related to significant improvements in systemic therapies including immunotherapies it is likely that patients with widespread metastases can become oligometastatic after systemic treatments While targeted immune therapies and SBRT are increasingly used in patients with oligometastatic disease their sequencing interaction and toxicities have not been studied and are poorly understood In this e book we discuss the state of the science of oligometastatic disease SBRT in a variety of locations and outline potential future direction of research efforts

Relative Radiation Sensitivities of Human Organ Systems Kurt I. Altman, John T. Lett, 2013-10-22

Advances in Radiation Biology Relative Radiation Sensitivities of Human Organ Systems Part III is the third volume of the series **Relative Radiation Sensitivities of Human Organ Systems** It presents reviews of organ systems not included in the preceding two parts **Advances in Radiation Biology** Volumes 12 and 14 The subject matter contained in the current volume is viewed through the eyes of the radiation therapist Although the presentations have strong clinical overtones an effort has been made wherever possible also to address the radiobiological bases of radiation sensitivity of organs The book contains seven chapters and begins with a study on radiation damage to the kidney This is followed by separate chapters on inherent or intrinsic radiosensitivity of human cells the impact of brachytherapy i e short distance radiation treatment using photon radiation on tumors and human tissue tolerance to fast neutron radiotherapy Subsequent chapters deal with normal tissue effects of combined hyperthermia and radiotherapy the impact of ionizing radiation on the successive stages of human development in utero and developments in theoretical knowledge and practical applications of ionizing radiations which have taken place in a little less than a century
