*Radiation Research: A Twentieth-century Perspective* J Champan, 2012-12-02 Radiation Research A Twentieth Century Perspective Volume I Congress Abstracts is a collection of abstracts presented at the Ninth International Congress of Radiation Research convened in Toronto Canada organized by the Radiation Research Society and the North American Hyperthermia Group at the invitation of the International Association of Radiation Research The Toronto venue for this congress recognizes a major role by Canadian scientists in the field of radiation research and also the strong participation of Canadian scientists in the North American Radiation Research Society Original science is shared at these Congresses through Congress lectures symposia presentations and proffered papers The Congress Board of Directors adopted a proposal that all abstracts of scientific presentations should become a permanent record of the official proceedings of the Congress In a manner somewhat analogous to the Canadian postal code system each abstract in this volume is identified at the top left hand corner by a code consisting of both letters and numbers printed on three lines Line one consists of one letter and two numbers that uniquely identify each scientific event The second line consists of a double digit number that designates the sequence of presentation within the specific scientific event The third line consists of a double letter code in which the first letter indicates the day of the week on which abstract material is presented and or discussed and the second letter indicates a morning or afternoon session

**AFRRI's Gamma-ray, X-ray, and Fission-neutron Calibration Curves for the Lymphocyte Dicentric Assay** P. G. S. Prasanna, 2002 Facilities are established at the Armed Forces Radiobiology Research Institute AFRRI to perform radiation induced chromosome aberration analysis for biological dosimetry Whole blood from healthy human volunteers was used after obtaining informed consent Peripheral blood lymphocytes were exposed in vitro to different types of radiation sup 60 Co gamma rays E gamma 1 25 MeV mean of the absorbed dose distribution of the lineal energy  $y_{sub D}$  1 9 keV micrometers 1 Gy min x rays 250 kV sub p E 83 keV  $y_{sub D}$  4 keV micrometers 1 Gy min or a fission spectrum neutron source E 0 71 MeV  $y_{sub D}$  65 keV micrometers 0 25 Gy min Distribution of radiation induced dicentrics among cells exhibited Poisson statistics as characterized by the Papworth method Papworth 1970 Dose response relationships for the yield of dicentrics for photon sources were fitted with a linear quadratic model using the maximum likelihood method and for the neutron source by a weighted linear regression method Comparison of the data with other published studies is presented The dose response relationships for dicentric induction by low and high linear energy transfer LET radiation are consistent with the single and two track model of aberration formation  $Y_{alpha D} beta D^{sup 2}$  An increase in  $y_{sub D}$  resulted in an increase in dicentric yield As expected fission neutrons induced a significantly higher yield of dicentrics than that caused by low LET sources The

linear component of the model corresponding to damage caused by single tracks is predominant with fission neutrons so that the dose effect relationship is essentially linear An automated metaphase finder system with a satellite scoring utility was used to improve data collection

Occupational Health Mary Janet Normandy, John P. Peeters, Mortimer L. Mendelsohn, 1995-02-16 Biomarkers have emerged as an exciting tool in disease prevention particularly in the workplace They may be used to document workers exposure to toxins signal the onset of health effects or identify individuals with susceptibility to certain environmental threats But the uncertainty is as great as the potential Are biomarkers suitable for widespread use How can they be deployed in diverse contexts How can biological information about workers be handled fairly and ethically *Biomarkers and Occupational Health* describes the state of biomarker development including the implications of the Human Genome program and presents a

range of viewpoints on the future of biomarkers from the leaders in the field This book explores the three basic types of biomarkers markers of exposure markers of health effects and markers of susceptibility to disease from a variety of perspectives It examines what can be learned from well known exposure sites Hiroshima and Nagasaki Chernobyl and the Hanford nuclear site in the United States for example and a wide range of human cases and animal studies The book also explores the costs and ramifications of developing a large scale program to monitor potentially exposed workers e g at a cleanup site A framework is offered for the use of biomarkers based on the mandate to change the environment before you change the worker The book explores how to identify ethical issues how to set development priorities and how to integrate biomarkers into an occupational health and safety program The authors present the latest technical findings about markers for chronic beryllium disease as well as markers for exposure to carcinogens radiation and chromium including prospects for detecting long past exposures Biomarkers and Occupational Health offers an update on biomarker development and explores a wide scope of issues This book will be important to occupational health professionals biomedical researchers toxicologists epidemiologists and labor and management officials involved in worker health issues Moritmer L Mendelsohn M D Ph D is Vice Chairman of the Radiation Effects Research Foundation RERF in Japan which studies the long term health effects of the atomic blasts in Hiroshima and Nagasaki and he is former Associate Director of the Lawrence Livermore National Laboratory in California John P Peeters Ph D is a geneticist who is currently directing a division of the Office of Occupational Medicine for the United States Department of Energy Mary Janet Normandy Ph D is a toxicologist who specializes in the metabolism of xenobiotics in mammalian systems She is currently a member of the Department of Energy s Office of Occupational Medicine

**BJR Supplement** ,1989      Radiation Dose Reconstruction for Epidemiologic Uses Committee on an Assessment of CDC Radiation Studies,Commission on Life Sciences,Division on Earth and Life Studies,National Research Council,1995-05-30 Growing public concern about releases of radiation into the environment has focused attention on the measurement of exposure of people living near nuclear weapons production facilities or in areas affected by accidental releases of radiation Radiation Dose Reconstruction for Epidemiologic Uses responds to the need for criteria for dose reconstruction studies particularly if the doses are to be useful in epidemiology This book provides specific and practical recommendations for whether when and how studies should be conducted with an emphasis on public participation Based on the expertise of scientists involved in dozens of dose reconstruction projects this volume Provides an overview of the basic requirements and technical aspects of dose reconstruction Presents lessons to be learned from dose reconstructions after Chernobyl Three Mile Island and elsewhere Explores the potential benefits and limitations of biological markers Discusses how to establish the source term that is to determine what was released Explores methods for identifying the environmental pathways by which radiation reaches the body Offers details on three major categories of dose assessment      *British Journal of Radiology* ,1992

**Radiation Therapy Physics** William R. Hendee,Geoffrey S. Ibbott,Eric G. Hendee,2013-05-13 The Third Edition of

Radiation Therapy Physics addresses in concise fashion the fundamental diagnostic radiologic physics principles as well as their clinical implications. Along with coverage of the concepts and applications for the radiation treatment of cancer patients, the authors have included reviews of the most up to date instrumentation and critical historical links. The text includes coverage of imaging in therapy planning and surveillance calibration protocols and precision radiation therapy as well as discussion of relevant regulation and compliance activities. It contains an updated and expanded section on computer applications in radiation therapy and electron beam therapy and features enhanced user friendliness and visual appeal with a new easy to follow format including sidebars and a larger trim size. With its user friendly presentation and broad comprehensive coverage of radiotherapy physics, this Third Edition doubles as a medical text and handy professional reference.

**Radiobiological Modelling in Radiation Oncology** Roger G. Dale, Bleddyn Jones, 2007. The move towards individually optimised treatments using knowledge of normal tissue and tumour radiosensitivity, proliferation rates etc in combination with three dimensional planning will need mathematical modelling to achieve its full potential. This modelling process will also be capable of helping develop a rational and cost effective use of resources. Amongst radiation oncologists and medical physicists there is a need for a greater understanding of the scope, applications and limitations of radiobiological modelling, particularly in complex situations that include multiple treatment variables, the respective influence of which are difficult to separate out by randomised trials without using radiobiologically based analysis. In future there will be increasing use of modelling in practical situations including treatment gap corrections, normal tissue tolerance predictions, optimisation of therapy determined by predictive assays, multi modality schedule design, the simulation of clinical trials, testing contemporaneous medico legal problems and teaching general principals of radiotherapy.

**Programmed Cell Death** Martin Lavin, Diane Watters, 1993-12-08. Only recently have the cellular and molecular aspects of cell suicide or perhaps euthanasia been investigated. From a September 1992 symposium in Brisbane 26 papers report advances in the biochemical mechanisms: DNA fragmentation, genetic regulation and apoptosis in the immune system and in cancer. **Small Molecule DNA and RNA Binders** Martine Demeunynck, Christian Bailly, W. David Wilson, 2006-03-06. The development of molecules that selectively bind to nucleic acids has provided many details about DNA and RNA recognition. The range of such substances, such as metal complexes, peptides, oligonucleotides and a wide array of synthetic organic compounds, is as manifold as the functions of nucleic acids. Nucleic acid recognition sequences are often found in the major or minor groove of a double strand while other typical interactions include intercalation between base pairs or the formation of triple or quadruple helices. One example of a binding mode that has recently been proposed is end stacking on such complex structures as the telomere tetraplex. In this comprehensive book, internationally recognized experts describe in detail the important aspects of nucleic acid binding and in so doing present impressive approaches to drug design. Since typical substances may be created naturally or synthetically, emphasis is placed on natural products, chemical synthesis

the use of combinatorial libraries and structural characterization The whole is rounded off by contributions on molecular modeling as well as investigations into the way in which any given drug interacts with its nucleic acid recognition site
