**Radio Spectrum Conservation** Joint Technical Advisory Committee,2012-06-01      **Radio Spectrum Conservation**  
Joint Technical Advisory Committee,2015-08-04 Excerpt from Radio Spectrum Conservation A Program of Conservation  
Based on Present Uses and Future Needs The subject of this volume is one of far reaching importance to society at large  
Since its inception radio communication has been plagued by a shortage of space for ever increasing numbers of stations and  
new services from ship to shore wireless in 1902 to television in 1952 As new regions of the radio spectrum have been  
explored and opened to practical operations commerce and industry have found more than enough new uses to crowd them  
As a result it has become increasingly clear that the spectrum is a public domain which must be conserved as carefully as if it  
were farm land forest preserves water power or mineral wealth The job of conservation has been complicated by the fact that  
wise administration by government while essential is not sufficient Radio obeys the laws of nature and its administration  
must proceed within the confines of scientific knowledge and procedures some of which such as the equations governing the  
propagation of radio waves over and above the earth are as complicated as any that science has to offer Add to this the fact  
that radio transmissions in one form or another affect the life of nearly every inhabitant of the globe Radio is essential to the  
safety of sea and air travel carries a substantial portion of all information across international borders makes the difference  
between winning a war or losing it gives entertainment and it is to be hoped education to half the population of the world
