Applied Linear Algebra Lorenzo Sadun, 2022-06-07 Linear algebra permeates mathematics as well as physics and engineering In this text for junior and senior undergraduates Sadun treats diagonalization as a central tool in solving complicated problems in these subjects by reducing coupled linear evolution problems to a sequence of simpler decoupled problems This is the Decoupling Principle Traditionally difference equations Markov chains coupled oscillators Fourier series the wave equation the Schrödinger equation and Fourier transforms are treated separately often in different courses Here they are treated as particular instances of the decoupling principle and their solutions are remarkably similar By understanding this general principle and the many applications given in the book students will be able to recognize it and to apply it in many other settings Sadun includes some topics relating to infinite dimensional spaces He does not present a general theory but enough so as to apply the decoupling principle to the wave equation leading to Fourier series and the Fourier transform The second edition contains a series of Explorations Most are numerical labs in which the reader is asked to use standard computer software to look deeper into the subject Some explorations are theoretical for instance relating linear algebra to quantum mechanics There is also an appendix reviewing basic matrix operations and another with solutions to a third of the exercises

**Time and Identity** Joseph Keim Campbell, Michael O'Rourke, Harry S. Silverstein, 2010-05-14 Original essays on the metaphysics of time identity and the self written by distinguished scholars and important rising philosophers The concepts of time and identity seem at once unproblematic and frustratingly difficult Time is an intricate part of our experience it would seem that the passage of time is a prerequisite for having any experience at all and yet recalcitrant questions about time remain Is time real Does time flow Do past and future moments exist Philosophers face similarly stubborn questions about identity particularly about the persistence of identical entities through change Indeed questions about the metaphysics of persistence take on many of the complexities inherent in philosophical considerations of time This volume of original essays brings together these two essentially related concepts in a way not reflected in the available literature making it required reading for philosophers working in metaphysics and students interested in these topics The contributors distinguished authors and rising scholars first consider the nature of time and then turn to the relation of identity focusing on the metaphysical connections between the two with a special emphasis on personal identity The volume concludes with essays on the metaphysics of death issues in which time and identity play a significant role This groundbreaking collection offers both cutting edge epistemological analysis and historical perspectives on contemporary topics Contributors Harriet Baber Lynne Rudder Baker Ben Bradley John W Carroll Reinaldo Elugardo Geoffrey Gorham Mark Hinchliff Jenann Ismael Barbara Levenbook Andrew Light Lawrence B Lombard Ned Markosian Harold Noonan John Perry Harry S Silverstein Matthew H Slater Robert J Stainton Neil A Tognazzini
