Random Winds:

Random Winds Belva Plain, 2009-12-16 A tragedy on a cold Adirondack day robbed country doctor Enoch Farrell of his three oldest children Then all his hopes rested with his son Martin who dreamed of becoming a doctor too Intelligent gifted Martin could have a brilliant future All that stood in his way was his family's poverty until he met wealthy beautiful Mary Fern Meig and her sister Jessie and everything changed forever Moving from a teeming New York hospital to the elite operating theaters of London Martin Farrell is about to learn the price of success a secret bargain with the Meigs that could resonate into the next generation and test the strength of a man and a woman's passion across the coming years Praise for Random Winds Wonderful A convincing sweeping novel A real page turner The Philadelphia Inquirer Impossible to put down South Bend Tribune Engrossing Publishers Weekly Richly woven A twisting and complex story that touches the lives of everyone UPI

NASA Technical Paper, 1983 **Transportation**, 1977-08 **Photoelectric Detection on Derived Attributes of Targets** Xing Yang, Yihua Hu, 2023-08-22 This book highlights the novel photoelectric detection technique on derived attributes of targets Photoelectric detection on derived attributes of targets is a new target detection and monitoring method It is achieved by acquiring three types of attributes of the target including those that reflect the essential features of parts of the target those directly generated from the target and those synthesized by the target features The book introduces the classification of derived attributes of targets and describes typical detection methods Emphases are put on laser detection of aerial moving targets using derived attributes such as the disturbance of atmospheric wind fields trailing vortexes and the disturbance of atmospheric components The authors also elaborate on visible light imaging detection using derived attributes such as retroreflection and the identification of target carriers Besides the synthetic attributes processing of integrated aerospace images is introduced for the detection of targets on the ground and sea surfaces This book can be used as a good reference for researchers engaged in the fields of photoelectric detection target detection and image processing and as a reference book for senior undergraduates and postgraduates in relevant majors

Proceedings of the National Symposium on Winds for Aerospace Vehicle Design Norman Sissenwine, 1962 **Energy Balance Climate Models** Gerald R. North, Kwang-Yul Kim, 2017-12-04 Energy Balance Climate Models Written by renowned experts in the field this first book to focus exclusively on energy balance climate models provides a concise overview of the topic It covers all major aspects from the simplest zero dimensional models proceeding to horizontally and vertically resolved models The text begins with global average models which are explored in terms of their elementary forms yielding the global average temperature right up to the incorporation of feedback mechanisms and some analytical properties of interest The effect of stochastic forcing is then used to introduce natural variability in the models before turning to the concept of stability theory Other one dimensional or zonally averaged models are subsequently presented along with various applications including chapters on paleoclimatology the inception of continental glaciations detection of signals in the climate system and optimal

estimation of large scale quantities from point scale data Throughout the book the authors work on two mathematical levels qualitative physical expositions of the subject material plus optional mathematical sections that include derivations and treatments of the equations along with some proofs of stability theorems A must have introduction for policy makers environmental agencies and NGOs as well as climatologists molecular physicists and meteorologists *Merchant Vessels of the United States* ,1989 **NASA Technical Memorandum** ,1991 *Quantum Dynamics of Submicron Structures* Hilda A. Cerdeira,B. Kramer,Gerd Schön,2012-12-06 Techniques for the preparation of condensed matter systems have advanced considerably in the last decade principally due to the developments in microfabrication technologies The widespread availability of millikelvin temperature facilities also led to the discovery of a large number of new quantum phenomena Simultaneously the quantum theory of small condensed matter systems has matured allowing quantitative predictions The effects discussed in *Quantum Dynamics of Submicron Structures* include typical quantum interference phenomena such as the Aharonov Bohm like oscillations of the magnetoresistance of thin metallic cylinders and rings transport through chaotic billiards and such quantization effects as the integer and fractional quantum Hall effect and the quantization of the conductance of point contacts in integer multiples of the conductance quantum Transport properties and tunnelling processes in various types of normal metal and superconductor tunnelling systems are treated The statistical properties of the quantum states of electrons in spatially inhomogeneous systems such as a random inhomogeneous magnetic field are investigated Interacting systems like the Luttinger liquid or electrons in a quantum dot are also considered Reviews are given of quantum blockade mechanisms for electrons that tunnel through small junctions like the Coulomb blockade and spin blockade the influence of dissipative coupling of charge carriers to an environment and Andreev scattering Coulomb interactions and quantization effects in transport through quantum dots and in double well potentials as well as quantum effects in the motion of vortices as in the Aharonov Casher effect are discussed The status of the theory of the metal insulator and superconductor insulator phase transitions in ordered and disordered granular systems are reviewed as examples in which such quantum effects are of great importance **Random Winds** Belva Plain,1980 From a quiet turn of the century village in upstate New York to war torn London from the bedsides of the rural poor to the life and death urgency of a great New York City hospital this is a powerful epic of three generations of doctors in one magnificent family The Farrells dedicated brilliant and driven to the edge of destruction by a love no human force could suppress **Wind Effects on Cable-Supported Bridges** You-Lin Xu,2013-03-07 As an in depth guide to understanding wind effects on cable supported bridges this book uses analytical numerical and experimental methods to give readers a fundamental and practical understanding of the subject matter It is structured to systemically move from introductory areas through to advanced topics currently being developed from research work The author concludes with the application of the theory covered to real world examples enabling readers to apply their knowledge The author provides background material covering areas such as wind

climate cable supported bridges wind induced damage and the history of bridge wind engineering Wind characteristics in atmospheric boundary layer mean wind load and aerostatic instability wind induced vibration and aerodynamic instability and wind tunnel testing are then described as the fundamentals of the subject State of the art contributions include rain wind induced cable vibration wind vehicle bridge interaction wind induced vibration control wind and structural health monitoring fatigue analysis reliability analysis typhoon wind simulation non stationary and nonlinear buffeting response Lastly the theory is applied to the actual long span cable supported bridges Structured in an easy to follow way covering the topic from the fundamentals right through to the state of the art Describes advanced topics such as wind and structural health monitoring and non stationary and nonlinear buffeting response Gives a comprehensive description of various methods including CFD simulations of bridge and vehicle loading Uses two projects with which the author has worked extensively Stonecutters cable stayed bridge and Tsing Ma suspension bridge as worked examples giving readers a practical understanding *Solar Energy Update* ,1981 Monthly Weather Review ,1985 *Advances in Geophysics* ,1956-01-01 *Advances in Geophysics*

Principles of Adaptive Optics Robert Tyson,2010-09-14 Since the publication of the second edition of *Principles of Adaptive Optics* the developments and applications in this area have increased tremendously Observatories are now producing outstanding science through adaptive optics technology components such as micromachined deformable mirrors and very low noise detectors are revolutionizing the f **NASA Technical Note** ,1973 **A Classical Response to Relational Theism** Brian J. Orr,2022-02-17 The classical doctrine of God expresses that the God of the Bible is triune a se simple immutable impassible eternal and the sovereign Lord over his creation which he created from himself Modern streams of theology within the evangelical circle continue to promote a doctrine of God that sharply contrasts the classical view the traditional view of God in Christian theism Therefore a critical response to such a theology is needed This study is a comprehensive analysis and sustained critique of Thomas Jay Oord s open relational doctrine of God Oord s model substitutes process metaphysics for classical metaphysics while attempting to retain foundational Christian doctrines that were established within a classical metaphysical framework **Statistical Dynamics and Reliability Theory for Mechanical Structures** Valery A. Svetlitsky,2012-12-06 The monograph text is based on lectures delivered by author during many years for students of Applied Iechanics Department of Bauman Ioscow State Technical University The monograph includes also analitical results of scientific research obtained in collaboration with industry Progress in developing new equipment has called for a better understand ing of the physical peculiarities pertaining to the action of designed structures in real conditions This is necessary for increasing the accuracy of the analysis and making these structures more reliable It has been found that classical determined perturbations are not principal and that determinism based methods of classical mechanics prove insufficient for understanding and explaining physical effects that arise at the operation of instruments located on moving objects the vibration of rocket engines the motion of a vehicle and the action of wind and seismic loads Therefore the

necessity arose for devising a new physical model to analyze these dynamic processes and in particular for creating a new mathematical apparatus that would allow us to take into account non deterministic external excitations The theory of random processes that had been developed well enough as applied to problems of radio engineering and automatic control where the effect produced by random excitations appeared to be commensurable with that of deterministic excitations and where the ignoring of the random ex citations would bring about incorrect results became such an apparatus **Haunting India**
