The Book of Involutions Max-Albert Knus,1998-06-30 This monograph is an exposition of the theory of central simple algebras with involution in relation to linear algebraic groups It provides the algebra theoretic foundations for much of the recent work on linear algebraic groups over arbitrary fields Involutions are viewed as twisted forms of hermitian quadrics leading to new developments on the model of the algebraic theory of quadratic forms In addition to classical groups phenomena related to triality are also discussed as well as groups of type F_4 or G_2 arising from exceptional Jordan or composition algebras Several results and notions appear here for the first time notably the discriminant algebra of an algebra with unitary involution and the algebra theoretic counterpart to linear groups of type D_4 This volume also contains a Bibliography and Index Features original material not in print elsewhere a comprehensive discussion of algebra theoretic and group theoretic aspects extensive notes that give historical perspective and a survey on the literature rational methods that allow possible generalization to more general base rings

Moufang Sets and Structurable Division Algebras Lien Boelaert,Tom De Medts,Anastasia Stavrova,2019-06-10 A Moufang set is essentially a doubly transitive permutation group such that each point stabilizer contains a normal subgroup which is regular on the remaining vertices these regular normal subgroups are called the root groups and they are assumed to be conjugate and to generate the whole group It has been known for some time that every Jordan division algebra gives rise to a Moufang set with abelian root groups The authors extend this result by showing that every structurable division algebra gives rise to a Moufang set and conversely they show that every Moufang set arising from a simple linear algebraic group of relative rank one over an arbitrary field k of characteristic different from 2 and 3 arises from a structurable division algebra The authors also obtain explicit formulas for the root groups the map and the Hua maps of these Moufang sets This is particularly useful for the Moufang sets arising from exceptional linear algebraic groups

Non-Associative Algebra and Its Applications Santos González,2012-12-06 This volume contains the proceedings of the Third International Conference on Non Associative Algebra and Its Applications held in Oviedo Spain July 12 17 1993 The conference brought together specialists from all over the world who work in this interesting and active field which is currently enjoying much attention All aspects of non associative algebra are covered Topics range from purely mathematical subjects to a wide spectrum of applications and from state of the art articles to overview papers This collection will point the way for further research for many years to come The volume is of interest to researchers in mathematics as well as those whose work involves the application of non associative algebra in such areas as physics biology and genetics

Numerical Algebra, Matrix Theory, Differential-Algebraic Equations and Control Theory Peter Benner,Matthias Bollhöfer,Daniel Kressner,Christian Mehl,Tatjana Stykel,2015-05-09 This edited volume highlights the scientific contributions of Volker Mehrmann a leading expert in the area of numerical linear algebra matrix theory differential algebraic equations and control theory These mathematical research areas are strongly related and often occur in

the same real world applications The main areas where such applications emerge are computational engineering and sciences but increasingly also social sciences and economics This book also reflects some of Volker Mehrmann's major career stages Starting out working in the areas of numerical linear algebra his first full professorship at TU Chemnitz was in Numerical Algebra hence the title of the book and matrix theory Volker Mehrmann has made significant contributions to these areas ever since The highlights of these are discussed in Parts I and II of the present book Often the development of new algorithms in numerical linear algebra is motivated by problems in system and control theory These and his later major work on differential algebraic equations to which he together with Peter Kunkel made many groundbreaking contributions are the topic of the chapters in Part III Besides providing a scientific discussion of Volker Mehrmann's work and its impact on the development of several areas of applied mathematics the individual chapters stand on their own as reference works for selected topics in the fields of numerical linear algebra matrix theory differential algebraic equations and control theory

Nonlinear Partial Differential Equations in Engineering and Applied Science Robert L. Sternberg, 2017-10-02 In this volume are twenty eight papers from the Conference on Nonlinear Partial Differential Equations in Engineering and Applied Science sponsored by the Office of Naval Research and held at the University of Rhode Island in June 1979 Included are contributions from an international group of distinguished mathematicians scientists and engineers coming from a wide variety of disciplines and having a common interest in the application of mathematics particularly nonlinear partial differential equations to real world problems The subject matter ranges from almost purely mathematical topics in numerical analysis and bifurcation theory to a host of practical applications that involve nonlinear partial differential equations such as fluid dynamics nonlinear waves elasticity viscoelasticity hyperelasticity solitons metallurgy shockless airfoil design quantum fields and Darcy's law on flows in porous media Nonlinear Partial Differential Equations in Engineering and Applied Science focuses on a variety of topics of specialized contemporary concern to mathematicians physical and biological scientists and engineers who work with phenomena that can be described by nonlinear partial differential equations *Publicationes mathematicae*

Cornelissen, Norbert Peyerimhoff, 2023-05-10 The question of reconstructing a geometric shape from spectra of operators such as the Laplace operator is decades old and an active area of research in mathematics and mathematical physics This book focusses on the case of compact Riemannian manifolds and in particular the question whether one can find finitely

many natural operators that determine whether two such manifolds are isometric coverings The methods outlined in the book fit into the tradition of the famous work of Sunada on the construction of isospectral non isometric manifolds and thus do not focus on analytic techniques but rather on algebraic methods in particular the analogy with constructions in number theory methods from representation theory and from algebraic topology The main goal of the book is to present the construction of finitely many twisted Laplace operators whose spectrum determines covering equivalence of two Riemannian manifolds The book has a leisure pace and presents details and examples that are hard to find in the literature concerning fiber products of manifolds and orbifolds the distinction between the spectrum and the spectral zeta function for general operators strong isospectrality twisted Laplacians the action of isometry groups on homology groups monomial structures on group representations geometric and group theoretical realisation of coverings with wreath products as covering groups and class field theory for manifolds The book contains a wealth of worked examples and open problems After perusing the book the reader will have a comfortable working knowledge of the algebraic approach to isospectrality This is an open access book

Rigakubu,1977 New Technical Books New York Public Library,1976 *Colloquium De Giorgi 2013 and 2014* Umberto Zannier,2015-03-19 Since 2001 the Scuola Normale Superiore di Pisa has organized the Colloquio De Giorgi a series of colloquium talks named after Ennio De Giorgi The Colloquio is addressed to a general mathematical audience and especially meant to attract graduate students and advanced undergraduate students The lectures are intended to be not too technical in fields of wide interest They must provide an overview of the general topic possibly in a historical perspective together with a description of more recent progress The idea of collecting the materials from these lectures and publishing them in annual volumes came out recently as a recognition of their intrinsic mathematical interest and also with the aim of preserving memory of these events
