Management of E-commerce and E-government Zhong Yuansheng,2007 E Commerce and E Government has become known as the wave of the future for business all over the world Whether large small or just starting E Commerce and E Government have been the easier and more sufficient way to handle business This book brings together revised and expanded versions of eighteen papers selected from the 2003 International Conference on Management of e Commerce and e Government This book presents leading edge research in this new and exciting field The ICMcG 2003 has initially received a total of 176 submissions from Australia China Norway UK and USA Unfortunately risk of SARS prevented many authors from actually participating in the conference The Program Committee of ICMcG selected papers through a careful reviewing process

Although some papers remain devoted to conceptual and general discussion about e Commerce management many papers have adopted quantitative or formal analysis methods in their research Results presented in these papers provide an important contribution especially as compared with earlier research based on qualitative methods alone This book presents cutting edge research in this new and exciting field

Collaborative Business Ecosystems and Virtual Enterprises Luis M. Camarinha-Matos, 2002-04-30 Towards collaborative business ecosystems Last decade was fertile in the emerging of new collaboration mechanisms and forms of dynamic virtual organizations leading to the concept of dynamic business ecosystem which is supported or induced by the progress of the ubiquitous I pervasive computing and networking The new technologies collaborative business models and organizational forms supported by networking tools invade all traditional businesses and organizations what requires thinking in terms of whole systems i e seeing each business as part of a wider economic ecosystem and environment It is also becoming evident that the agile formation of very dynamic virtual organizations depends on the existence of a proper longer term embedding or nesting environment e g regional industry cluster in order to guarantee certain basic requirements such as trust building Trusting your partner is a gradual and long process common interoperability ontology and distributed collaboration infrastructures agreed business practices requiring substantial engineering Ire engineering efforts a sense of community we vs the others and some sense of stability when is a dynamic state or a stationary state useful The more frequent situation is the case in which this nesting environment is formed by organizations located in a common region although geography is not a major facet when cooperation is supported by computer networks

Re-Engineering Software Roy Rada, 2024-02-02 Creating software of any kind is an enormously expensive proposition whether for internal use or commercial application The range of activities involved in engineering and creating software are mind boggling in complexity Yet every time new software is developed most programmers start from scratch without considering what might be re used or salvaged from existing programs Re Engineering Software addresses the principles approaches support systems underlying methodologies and real case examples for re using and thus building on previously existing software

Balanced Automation Systems II Luis M. Camarinha-Matos, Hamideh Afsarmanesh, 2013-06-29 xiv box for Balanced Automation research in this area is still young and emerging In our opinion the development of hybrid balanced solutions to cope with a variety of automation levels and manual approaches is a much more challenging research problem

than the search for a purely automatic solution Various research activities described in this book illustrate some of these challenges through the development proposals assisting tools and initial results In certain chapters however the balancing aspects are not yet achieved in the research area but their inclusion in this book is intended to give a broader and more comprehensive perspective of the multiple areas involved One important aspect to be noticed is the extension and application of the concept of balanced automation to all areas of the manufacturing enterprise Clearly the need for a balanced approach is not restricted to the shop floor components rather it applies to all other areas as illustrated by the wide spectrum of research contributions found in this book For instance the need for an appropriate integration of multiple systems and their perspectives is particularly important for the implantation of virtual enterprises Although both the BASYS 95 and the BASYS 96 conferences have provided important contributions approaches and tools for the implantation of balanced automation systems there are a number of areas that require further research
