Affairs, 1973 *The Politics of Linkage* Brian Bow, 2010-07-01 Do Canada and the United States share a special relationship or is this a mere myth that has masked stark calculations of national interest Recent tensions over the Iraq War and ballistic missile defence have resurrected this perennial Canadian debate and triggered alarm about whether the US would make coercive linkages between issues to force Canada to change its policies The Politics of Linkage cuts through political rhetoric

and academic clichs by offering detailed accounts of postwar disputes over nuclear weapons Arctic waters oil and gas and the Iraq War Although early Cold War disputes were governed by a diplomatic culture that was genuinely special the limits of Canadian autonomy are now defined by the ever shifting alignment of interest groups in Washington and by international agreements and organizations **Alberta Formed - Alberta Transformed** Alberta 2005 Centennial History

Weinberg,1992-11-18 Blurb Contents Marvelous reading with few problems of the interaction between science technology and society left untouched One need not always agree but one cannot come away without a better education I found the parts on scientific administration and on the interaction of science and society excellent and provocative reading and the parts on energy and nuclear energy very much to the point American Journal of Physics Alvin Weinberg explores through these collected essays the ever troublesome relationship between science technology and society The title is taken from Weinberg s assertion that most of the issues arising at the intersection of science and society depend upon answers to questions that lie outside the power of science issues that are trans scientific Weinberg who during World War II helped develop the first nuclear reactors has much to say on the current role of nuclear power and the possibilities for the future Other topics include strategic defenses and arms control the role of the science administrator and the way in which time energy and resources are allocated to public problems In this remarkable record of a half century of public oriented work Weinberg lays the foundation for a philosophy of scientific administration parallel to the more established philosophy of science **Congress and National Energy Policy** James Everett Katz, James Katz evaluates the implications to the American political system of Congress s struggle over the formulation of a national energy policy during the last decade He makes an original contribution by analyzing the policy in a wider theoretical and historical

context This combination of history description analysis and theory building makes the book highly informative and useful Katz shows that although energy supply is one of the greatest problems facing our generation and a key factor in the competition among world powers Congress has often been unable to form effective energy policies By examining Congress s reaction to the energy policy initiatives of recent administrations the organizational and sociological limitations of the nation s ability to grapple with the development of a comprehensive energy policy and the attempts to build a governmental organization to administer it Katz provides new insight into Congress as an organization as well as into the proclivities and dynamics of the U S policy system He also applies his own theory of organization to Congress to help predict and explain Congressional behavior **National Energy Transportation Study** ,1980 This study focuses on changing transport patterns caused by the expected shift from oil to coal assessing the ability of the Nation s transportation systems to carry future volumes of coal petroleum natural gas and nuclear materials Trends in energy commodity transportation are predicted Areas are identified where capacity problems might require expanded facilities Also assessed are possible financial social safety and environmental constraints on the capability of the system to meet identified needs Focus is on 1985 and 1990 with few problems anticipated by 1985 and none that would seriously impede energy transportation National Energy Transportation Study United States.
