Extrusion Processing Technology Jean-Marie Bouvier, Osvaldo H. Campanella, 2014-03-31 Extrusion is the operation of forming and shaping a molten or dough like material by forcing it through a restriction or die It is applied and used in many batch and continuous processes However extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components melting of polymers mixing of viscous media heat processing of polymeric and biopolymeric materials product texturization and shaping defibering and chemical impregnation of fibrous materials reactive extrusion and fractionation of solid liquid systems Extrusion processing technology is highly complex and in depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area this book aims to provide readers with these analyses and discussions *Extrusion Processing Technology Food and Non Food Biomaterials* provides an overview of extrusion processing technology and its established and emerging industrial applications Potency of process intensification and sustainable processing is also discussed and illustrated The book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians The authors bring their research and industrial experience in extrusion

processing technology to provide a comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods especially cereals snacks textured and fibrated proteins functional ingredients and instant powders feeds especially aquafeeds and petfoods bioplastics and plastics biosourced chemicals paper pulp and biofuels It will also be of interest to students of food science food engineering and chemical engineering Also available Formulation Engineering of Foods Edited by J E Norton P J Fryer and I T Norton ISBN 978 0 470 67290 7 Food and Industrial Bioproducts and Bioprocessing Edited by N T Dunford ISBN 978 0 8138 2105 4 Handbook of Food Process Design Edited by J Ahmed and M S Rahman ISBN 978 1 4443 3011 3      **Reactive Modifiers for Polymers** S. Al-Malaika, 2012-12-06 Chemical modification of polymers by reactive modifiers is no longer an academic curiosity but a commercial reality that has delivered a diverse range of speciality materials for niche markets reactively grafted styrenic alloys maleated polyolefins super tough nylons silane modified and moisture cured polyolefins and thermoplastic elastomers are but few examples of commercial successes Although the approach of reactive modification of polymers has been largely achieved either in solution or in the solid state through in situ reactions in polymer melts it is the latter route that has attracted most attention in the last two decades owing to its flexibility and cost effectiveness This route referred to as reactive processing focuses on the use of suitable reactive modifiers and the adoption of conventional polymer processing machinery an extruder or a mixer as a chemical reactor to perform in situ targeted reactions for chemical modification of preformed polymers This relatively simple though scientifically highly challenging approach to reactive modification offers unique opportunities in exploiting various reactive modifiers for the purpose of altering and transforming in a controlled manner the properties of preformed commercial polymers into new speciality materials with tailor made properties and custom designed performance for target applications Such an economically attractive route constitutes a radical diversion away from the traditional practices of manufacturing new polymers from monomers which involves massive investments in sophisticated technologies and chemical plants      Advances in Polyolefin Nanocomposites Vikas Mittal, 2010-12-07 With the advent of polymer nanocomposites research on polyolefin nanocomposites has grown exponentially Correcting the deficiency of a meaningful text on these important materials Advances in Polyolefin Nanocomposites sums up recent advances in nanoscale dispersion of filler in polyolefins Presents a basic introduction to polyolefin nanocomposite      Modification and Blending of Synthetic and Natural Macromolecules Francesco Ciardelli, Stanislaw Penczek, 2007-10-13 The book provides a unique collection of 15 contributions by 15 internationally recognized scientists performing intensive research activity on the preparation and characterization of complex and multiphase materials based on macromolecules as well as on the evaluation and simulation of structure properties relations The topic is assuming a general increasing importance as providing a highly sustainable and modern approach to the present and future development of the important area of materials science and

technology The scientific route along the successive contributions goes from the controlled preparation of functional MM both by innovative polymerization reactions and preformed polymers modification intramacromolecular complexity to their combination with other MMs and materials to give blends and composites where new properties are conveniently achieved by morphologic complexity The synergic behaviour of the different components in these last is obtained by reactive processing producing the necessary interfacial adhesion Even if most examples deal with man made MMs biopolymers are also included The various chapters provide in most cases an exhaustive fundamental description assisted by an up to date and broad list of relevant references The book is therefore an excellent informative and formative instrument for those involved in complex materials preparation and application in research and industry
