Cartwright,2015-07-10 This book has been replaced by Executive Skills and Reading Comprehension Second Edition ISBN 978 1 4625 5149 1 Speaking, Reading, and Writing in Children With Language Learning Disabilities Katharine G. Butler,Elaine R. Silliman,2001-12-01 The ability to use language in more literate ways has always been a central outcome of education Today however being literate requires more than functional literacy the recognition of printed words as meaningful It requires the knowledge of how to use language as a tool for analyzing synthesizing and integrating what is

heard or read in order to arrive at new interpretations Specialists in education cognitive psychology learning disabilities communication sciences and disorders and other fields have studied the language learning problems of school age children from their own perspectives All have tended to emphasize either the oral language component or phonemic awareness The major influence of phonemic awareness on learning to read and spell is well researched but it is not the only relevant focus for efforts in intervention and instruction An issue is that applications are usually the products of a single discipline or profession and few integrate an understanding of phonemic awareness with an understanding of the ways in which oral language comprehension and expression support reading writing and spelling Thus what we have learned about language remains disconnected from what we have learned about literacy interrelationships between language and literacy are not appreciated and educational services for students with language and learning disabilities are fragmented as a result This unique book a multidisciplinary collaboration bridges research practice and the development of new technologies It offers the first comprehensive and integrated overview of the multiple factors involved in language learning from late preschool through post high school that must be considered if problems are to be effectively addressed Practitioners researchers and students professionally concerned with these problems will find the book an invaluable resource

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership
