R. Bruce King

Reflection And Beyond:

Beyond the Reflection's Edge Bryan Davis, 2009-05-26 Sixteen year old Nathan Shepherd has a great life traveling where the careers of his father an investigator and mother a renowned violinist take him until his parents are found murdered Left with only a mirror and notes from his father s last case Nathan goes into hiding at the remote country home of Tony his father s college buddy and Tony s teenage daughter Kelly The mysterious mirror must be a clue to what happened to his parents and when images appear in it people and things that don t exist Nathan and Kelly painstakingly gather evidence But the killers want the mirror too and danger threatens the teens at every turn As it becomes evident that Nathan s father had stumbled upon dark forces at work in the world several questions arise Could it be that the mirror is a portal to a parallel world Could this technology be used for evil purposes And could his parents still be alive trapped in another dimension Nathan and Kelly struggle to solve the mystery before they too become victims This chilling hair raising adventure is jam packed with action in a fantastical world where nothing is as it seems and even mirrors tell lies

Beyond the Quartic Equation R. Bruce King, 2009-01-16 One of the landmarks in the history of mathematics is the proof of the nonexistence of algorithms based solely on radicals and elementary arithmetic operations addition subtraction multiplication and division for solutions of general algebraic equations of degrees higher than four This proof by the French mathematician Evariste Galois in the early nineteenth century used the then novel concept of the

permutation symmetry of the roots of algebraic equations and led to the invention of group theory an area of mathematics now nearly two centuries old that has had extensive applications in the physical sciences in recent decades The radical based algorithms for solutions of general algebraic equations of degrees 2 quadratic equations 3 cubic equations and 4 quartic equations have been well known for a number of centuries The quadratic equation algorithm uses a single square root the cubic equation algorithm uses a square root inside a cube root and the quartic equation algorithm combines the cubic and quadratic equation algorithms with no new features The details of the formulas for these equations of degree d $d = 2, 3, 4$ relate to the properties of the corresponding symmetric groups S_d which are isomorphic to the symmetries of the equilateral triangle for $d = 3$ and the regular tetrahedron for $d = 4$
