through its descriptive phase of naming and numbering has probably reached that stage at which relatively few new truly new viruses will be discovered Triggered by the intellectual probes and techniques of molecular biology genetics biochemical cytology and high resolution microscopy and spectroscopy the field has experienced a genuine information explosion Few serious attempts have been made to chronicle these events This comprehensive series which will comprise some 6000 pages in a total of about 22 volumes represents a commitment by a large group of active investigators to analyze digest and expostulate on the great mass of data relating to viruses much of which is now amorphous and disjointed and scattered throughout a wide literature In this way we hope to place the entire field in perspective and to develop an invaluable reference and sourcebook for researchers and students at all levels This series is designed as a continuum that can be entered anywhere but which also provides a logical progression of developing facts and integrated concepts American Book Publishing Record Cumulative 1998 R R Bowker Publishing,1999-03 **Recombinant DNA Methodology II** Ray Wu,2012-12-02 The critically acclaimed laboratory standard for forty years *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike More than 250 volumes have been published all of them still in print and much of the material is relevant even today truly an essential publication for researchers in all fields of life sciences *Methods for DNA isolation and cloning Synthesizing complementary DNA cDNA Cleaving and manipulating DNA Selecting useful reporter genes Constructing vectors for cloning genes Constructing expression vectors Site directed mutagenesis and gene disruption Identifying and mapping genes Transforming animal and plant cells Sequencing DNA Amplifying and manipulating DNA and PCR Detecting DNA protein interaction* *Electron Paramagnetic Resonance Investigations of Biological Systems by Using Spin Labels, Spin Probes, and Intrinsic Metal Ions Part A* ,2015-10-05 *Electron Paramagnetic Resonance Investigations of Biological Systems by Using Spin Labels Spin Probes and Intrinsic Metal Ions Part A B* are the latest volumes in the *Methods in Enzymology* series continuing the legacy of this premier serial with quality chapters authored by leaders in the field This volume covers research methods centered on the use of Electron Paramagnetic Resonance EPR techniques to study biological structure and function Timely contribution that describes a rapidly changing field Leading researchers in the field Broad coverage Instrumentation basic theory data analysis and applications **Medical and Health Care Books and Serials in Print** ,1987 *Neuroendocrine Peptide Methodology* P.
