*Population Age Structure and the Budget*

*Deficit* Derek Hung Chiat Chen, 2004 Chen focuses on the effects of age structure changes on the size of budget deficits of national governments More specifically he determines whether differences in age structure can account for the observed differences in budget deficits across countries as well as across time By way of an extension of the untested theory of negative bequest motives advocated by Cukierman and Meltzer 1989 the author argues that the commonly accepted notion that population aging tends to increase the budget deficits of economies is theoretically consistent However preliminary results from country and time fixed effects panel regressions estimated from 1975 to 1992 over 55 industrial and developing countries indicate statistical evidence for this postulation is present only in the developing countries but not in the industrial countries This paper a product of the Knowledge for Development Program World Bank Institute is part of a larger effort in the institute to study the economic and social effects of population aging World Bank web site *The Cumulative Book Index*, 1998 A world list of books in the English language *The Principle of Trading Economics* Zhenying Wang, 2019-11-23 This book is devoted to establishing a completely new concept within economics referred to as trading economics which is a reconstructed economic system in theory that seeks perfect harmony between micro and macro elements in a structured way hence making the economic theory a rigorous system supported by internal logical continuity Representing a revolution of the existing theoretical framework trading economics has changed the logic of mainstream economics Specifically it deduces the macro whole from the micro individuals and it introduces a systematic and comprehensive analysis approach It stresses that within an interconnected world the interaction between trading agents is the fundamental driving force behind the operation development and evolution of the economic system **Land Management & Economics** Kim Hin Ho, 2020-07-21 This book is concerned with a unique overall land policy optimization model under active government policy resulting in the sustainable effectiveness and efficiency of land policy Such a model distinguishes it from the highly specific urban planning land use optimization model meant for optimizing land use specification strategic land uses land use restrictions and control like zoning Policy input is concerned with a hierarchical and structural definition of policy while Additionality looks at land policy output outcome variables impacting broader land policy efficiency and effectiveness goals their associated output indicators and the interaction with the macroeconomy Long run urban policy macroeconomy interaction is modeled in a contemporaneous cointegration model estimation involving different sectors of the economy The model looks at the equilibrium and optimal land using economic activities A dynamic interaction of land policy outcomes and their economic implications is discussed via cointegration tests and modelling This book develops a rigorous system dynamics based computable general equilibrium model for direct real estate market uncertainty i e the frequent mismatch between office demand and supply under the impact of limited land constraint the domestic common stock market the macro economy and macroeconomic policy Such dynamic interaction is structured under the demand side and supply side aspects The book looks at the binomial option pricing model by Cox Ross and Rubinstein to model the risk neutral process for short term interest

American Book Publishing Record, 2005. Introduction to Managerial Economics Dr. Santanu Kumar Das, *Local Activity Principle* Klaus Mainzer, Leon O. Chua, 2013. The principle of local activity explains the emergence of complex patterns in a homogeneous medium. At first defined in the theory of nonlinear electronic circuits in a mathematically rigorous way it can be generalized and proven at least for the class of nonlinear reaction-diffusion systems in physics chemistry biology and brain research. Recently it was realized by memristors for nanoelectronic device applications. In general the emergence of complex patterns and structures is explained by symmetry breaking in homogeneous media which is caused by local activity. This book argues that the principle of local activity is really fundamental in science and can even be identified in quantum cosmology as symmetry breaking of local gauge symmetries generating the complexity of matter and forces in our universe. Applications are considered in economic financial and social systems with the emergence of equilibrium states symmetry breaking at critical points of phase transitions and risky acting at the edge of chaos. **Money Basics** Derek B.
