*Advances in Environmental Psychology (Volume 5)* Andrew Baum, Jerome E. Singer, 2020-09-10 The development of a field or an area of inquiry is often marked by changes in measurement techniques shifts in analytic emphasis and disputes over the best ways of doing research In many areas of psychology a number of issues have characterized methodological evolution of the discipline including questions regarding context and reductionism or laboratory versus field research For some of the newer areas in psychology such as environment or health psychology this is

not an issue of either or Although there has been some debate about these trade offs it is generally regarded by people in this field that some combination of the two approaches is essential Depending on the question being studied this balance may change However the questions asked are less likely to inquire which way is better and concentrate on how both may be used This observation serves to illustrate the fact that different research endeavours have different methodological issues Originally published in 1985 this volume explores some of the issues characterizing work on health environment and behavior
