Shades of Loneliness Richard Stivers, 2004-02-09 In this incisive and controversial book Richard Stivers rejects genetic explanations of psychological problems arguing instead that the very organization of technological societies is behind the pervasive experience of loneliness In its extreme form loneliness assumes pathological dimensions in neurosis and schizophrenia which reflect the contradiction between power and meaninglessness that characterizes modern life Loneliness in its many manifestations seems to be the price we must pay for living in a technological world Yet nurturing family friend and community ties can mitigate its culturally and psychologically disorganizing power This book is a clarion call for a renewal of moral awareness and custom to combat the fragmentation and depersonalization of our technological civilization Visit our website for sample chapters

Shades of Loneliness Richard Stivers, 2004 To varying degrees loneliness has us all in its grip In this incisive and controversial book Richard Stivers rejects the recent emphasis on genetic explanations of psychological problems arguing that the very organization of technological societies is behind the pervasive experience of loneliness The extreme rationality that governs our institutions and organizations results in abstract and impersonal relationships in much of daily life Moreover as common meaning is gradually eroded our connections to others become vague and tenuous Our ensuing fear and loneliness however can be masked by an outgoing extroverted personality In its extreme form loneliness assumes pathological dimensions in neurosis and schizophrenia Stivers maintains that even here the causes remain social The various forms of neuroses and psychoses follow the key contradictions of a technological society For instance narcissism and depression reflect the tension between power and meaninglessness that characterizes modern societies Stivers demonstrates that there is a continuum from the normal technological personality through the various neuroses to full blown schizophrenia He argues that all forms of loneliness emanate from the same cause they likewise share a common dynamic despite their differences Loneliness in its many manifestations seems to be the price we must pay for living in the modern world Yet nurturing family friend and community ties can mitigate its culturally and psychologically disorganizing power This book is a clarion call for a renewal of moral awareness and custom to combat the fragmentation and depersonalization of our technological civilization

prevailing sense that we are busier than ever before and that the pace of life is too rushed Most of us can relate to the feeling of having too much to do and not enough time for the people and things we value most We feel fragmented overwhelmed by busyness and the tyranny of gadgets Veteran pastor and teacher Arthur Boers offers a critical look at the isolating effects of modern life that have eroded the centralizing focusing activities that people used to do together He suggests ways to make our lives healthier and more rewarding by presenting specific individual and communal practices that help us focus on what really matters These practices such as shared meals gardening hospitality walking prayer and reading aloud bring our lives into focus and build community The book includes questions for discernment and application and a foreword by Eugene H Peterson

Spirits of Community K. D. M. Snell, 2016-06-16 Concern about the decline of community and the theme of community spirit are internationally widespread in the modern world The English past has featured many representations of declining community expressed by those who lamented its loss in quite different periods and in diverse genres This book analyses how community spirit and the passing of community have been described in the past whether for good or ill with an eye to modern issues such as the so called loneliness epidemic or the social consequences of alternative structures of community It does this through examination of authors such as Thomas Hardy James Wentworth Day Adrian Bell and H E Bates by appraising detective fiction writers analysing parish magazines considering the letter writing of the parish poor in the 18th and 19th centuries and through the depictions of realist landscape painters such as George Morland K D M Snell addresses modern social concerns showing how many current preoccupations had earlier precedents In presenting past representations of declining communities and the way these affected individuals of very different political persuasions the book draws out lessons and examples from the past about what community has meant hitherto setting into context modern predicaments and judgements about spirits of community today *Technology, Society and Sustainability* Lech W.

[The Metaphysics of Technology](#) David Skrbina, 2014-07-25 What is technology Why does it have such power in our lives Why does it seemingly progress of its own accord and without regard to social or environmental well being The quest for the essence of technology is an old one with roots in the pre Socratic philosophy of ancient Greece It was then that certain thinkers first joined the ideas of techn and logos into a single worldview The Greeks saw it as a kind of world force present in both the works of men

and in nature itself It was the very creative power of the cosmos In the 20th century German thinkers like Dessauer Juenger and Heidegger sought the metaphysical basis of technology with varying success French theologian Jacques Ellul argued persuasively that technology was an autonomous force of nature that determined all aspects of human existence but he neglected the metaphysical underpinnings Recent writers in the philosophy of technology have generally eschewed metaphysics altogether preferring to concentrate on constructivist models or pragmatic analyses In the present work Skrbina returns to a classic metaphysical approach seeking not so much an essence of technology but rather a deep and penetrating analysis of the entire technological phenomenon Drawing on the Greeks he argues for a teleological metaphysics in which increasing order in the universe is itself defined as a technological process On this reading all of reality constitutes a technical sphere a panteknikon of universal scope This work the first ever book length treatment of the topic breaks new ground by providing an in depth and critical study of the metaphysics of technology as well as drawing out the practical consequences Technology poses significant risks to humanity and the planet risks that can be mitigated through a detailed philosophical analysis
