Barr Taylor,2006-01-01 The Oxford Handbook of Causation Helen Beebe,Christopher Hitchcock,Peter Menzies,2012-01-12 Causation is a central topic in many areas of philosophy In metaphysics philosophers want to know what causation is and how it is related to laws of nature probability action and freedom of the will In epistemology philosophers investigate how causal claims can be inferred from statistical data and how causation is related to perception knowledge and explanation In the philosophy of mind philosophers want to know whether and how the mind can be said to have causal efficacy and in ethics whether there is a moral distinction between acts and omissions and whether the moral value of an act can be judged according to its consequences And causation is a contested concept in other fields of enquiry such as biology physics and the law This book provides an in depth and comprehensive overview of these and other topics as well as the history of the causation debate from the ancient Greeks to the logical empiricists The chapters provide surveys of contemporary debates while often also advancing novel and controversial claims and each includes a comprehensive bibliography and suggestions for further reading The book is thus the most comprehensive source of information about causation currently available and will be invaluable for upper level undergraduates through to professional philosophers **Field and Stream** ,1911 Nu Erth Adventure Lulu Rice,2024-09-19 Nu Erth is a creature birthed all alone on a world that he knows nothing about given a quest by a strange voice to name every creature and thing that Nu Erth sees Nu Erth takes off on adventures to do the quest given to him by this strange voice from a sphere of light Along with the quest Nu Erth is also given the ability to use knowledge of any and all magic by the strange voice Yet Nu Erth must discover what magic is first Oh and did we forget to mention that Nu Erth is the only hatchling dragon of his kind on the new world where he is birthed Being the only hatchling dragon of his kind on this new world What awaits Nu Erth as he begins his adventures to do the quest given to him by the strange voice from the sphere of light Does Nu Erth make any friends along his adventures Does Nu Erth meet other hatchling dragons or even dragons of his own kind Only Nu Erth Adventures can tell you that and what awaits our hatchling dragon Communication Disorders in Multicultural Populations Dolores E. Causation and Laws of Nature H. Sankey, 2013-03-14 Causation and Laws of Nature is a collection of articles which represents current research on the metaphysics of causation and laws of nature mostly by authors working in or active in the Australasian region The book provides an overview of current work on the theory of causation including counterfactual singularist nomological and causal process approaches It also covers work on the nature of laws of nature with special emphasis on the scientific essentialist theory that laws of nature are at base the fundamental dispositions or capacities of natural kinds of things Because the book represents a good cross section of authors currently working on these themes in the Australasian region it conveys something of the interest and excitement of an active philosophical debate between advocates of several different research programmes in the area

Causation and Explanation Stathis Psillos, 2014-12-18 What is the nature of causation How is causation linked with explanation And can there be an adequate theory of explanation These questions and many others are addressed in this unified and rigorous examination of the philosophical problems surrounding causation laws and explanation Part 1 of this book explores Hume s views on causation theories of singular causation and counterfactual and mechanistic approaches Part 2 considers the regularity view of laws and laws as relations among universals as well as recent alternative approaches to laws Part 3 examines the issues arising from deductive nomological explanation statistical explanation the explanation of laws and the metaphysics of explanation Accessible to readers of all levels this book provides an excellent introduction to one of the most enduring problems of philosophy **Border**

Crossings Ian Marshall, 2012 The International Appalachian Trail runs north from Mount Katahdin seven hundred miles to the end of the Gasp Peninsula Inspired by Basho Ian Marshall hiked it for six summers probing the poetics of haiku while

exploring a vast and beautiful wilderness little known in the US Marshall is an engaging trail companion and a superb story teller with a self deprecating wit and sharp intellect that spice up his observations and ideas Like Basho he finds the miraculous in the common and elevates the humble walk into a spiritual practice sprinkling his narrative with lovely original haiku that seem to have condensed in the moment like droplets of dew Backpackers will appreciate his pungent descriptions of life on the trail and ecocritics will savor his abundant insights on poetry nature and culture This lively book serves up a classic blend of high adventure literary pilgrimage and self discovery It tastes as tart and fresh as wild raspberries John Tallmadge past president of the Association for the Study of Literature and Environment and author of *The Cincinnati Arch Learning from Nature in the City* **Conceptual Systems** Harold I. Brown, 2007-01-24 Exploring how new concepts are entered into our systems along with sufficient continuity with older ideas to ensure understanding this text highlights the different aspects that present an insightful view into the various theories of concepts *Dombey and Daughter* Renton Nicholson, 1850 **Pacific Fisherman** , 1957 Since 1926 includes the Annual statistical number which supersedes the Pacific fisherman year book **Techno-Scientific Practices** Federica Russo, 2022-10-03 In scholarly debates as well as in everyday parlance we tend to pull science and technology apart science gives us theory and technology applies it In practice however science and technologies are highly intertwined In *Techno Scientific Practices An Informational Approach* Federica Russo looks at the practice of science and elucidates the role of technologies and instruments in the process of knowledge production In this exercise it becomes evident that technologies cannot be analyzed on their own but always in relation to epistemic agents Thus *Techno Scientific Practices* emphasizes the importance of analyzing the process of knowledge production in techno scientific contexts in which there is a triad of relations to look at us the instruments and the world The book thus builds bridges between the philosophy of science philosophy of technology and science and technology studies in an unprecedented way *The New Mechanical Philosophy* Stuart Glennan, 2017-07-26 *The New Mechanical Philosophy* argues for a new image of nature and of science one that understands both natural and social phenomena to be the product of mechanisms and that casts the work of science as an effort to discover and understand those mechanisms Drawing on an expanding literature on mechanisms in physical life and social sciences Stuart Glennan offers an account of the nature of mechanisms and of the models used to represent them A key quality of mechanisms is that they are particulars located at different places and times with no one just like another The crux of the scientist s challenge is to balance the complexity and particularity of mechanisms with our need for representations of them that are abstract and general This volume weaves together metaphysical and methodological questions about mechanisms Metaphysically it explores the implications of the mechanistic framework for our understanding of classical philosophical questions about the nature of objects properties processes events causal relations natural kinds and laws of nature Methodologically the book explores how scientists build models to represent and understand phenomena and the mechanisms responsible for them Using this account of

representation Glennan offers a scheme for characterizing the enormous diversity of things that scientists call mechanisms and explores the scope and limits of mechanistic explanation

Explaining the Brain Carl F. Craver, 2007-06-07 What distinguishes good explanations in neuroscience from bad Carl F Craver constructs and defends standards for evaluating neuroscientific explanations that are grounded in a systematic view of what neuroscientific explanations are descriptions of multilevel mechanisms In developing this approach he draws on a wide range of examples in the history of neuroscience e g Hodgkin and Huxleys model of the action potential and LTP as a putative explanation for different kinds of memory as well as recent philosophical work on the nature of scientific explanation Readers in neuroscience psychology the philosophy of mind and the philosophy of science will find much to provoke and stimulate them in this book

Determinism, Causality and Explanation in Economics Dawid Megger, 2025-06-27 In recent years the concepts of determinism causality and explanation have taken on particular importance in the economic literature Due to the failures of economic predictions based on mathematical models philosophers and economists turned their attention to methodological issues At the same time heterodox approaches to economics have received increased attention including the Austrian school of economics an intellectual tradition that perceives economics as a science of human action and has emphasised the role of causal explanations practically from its inception This book opens by exploring disputes in the philosophy of science over the fundamental goal of science While instrumentalists argue that scientists should aim at good predictions regardless of the veracity of theories according to scientific realists they should look for knowledge that reflects reality The book shows that the Austrian tradition adheres to scientific realism and can be perceived as a middle ground between historicism and positivism It discusses the determinism free will problem in economics and its methodological relevance Then it examines various theories of causality regularity counterfactual interventionist probabilistic and process mechanistic and their applicability to economics Finally it explores possible and desirable types of explanations in economics As the book tries to show the Austrian school offers a unique and valuable approach to these issues The book will be of particular interest to readers in economic theory philosophy of economics and economic methodology especially those appreciating heterodox traditions

Phenomenological Approaches to Physics Harald A. Wiltzsche, Philipp Berghofer, 2020-06-23 This book offers fresh perspective on the role of phenomenology in the philosophy of physics which opens new avenues for discussion among physicists standard philosophers of physics and philosophers with phenomenological leanings Much has been written on the interrelations between philosophy and physics in the late 19th and early 20th century and on the emergence of philosophy of science as an autonomous philosophical sub discipline This book is

about the under explored role of phenomenology in the development and the philosophical interpretation of 20th century physics Part 1 examines questions about the origins and value of phenomenological approaches to physics Does the work of classical phenomenologists such as Husserl Merleau Ponty or Heidegger contain elements of systematic value to both the practice and our philosophical understanding of physics How did classical phenomenology influence standard philosophy of science in the Anglo American and other traditions Part 2 probes questions on the role of phenomenology in the philosophies of physics and science Can phenomenology help to solve Wigner s puzzle the problem of the unreasonable effectiveness of mathematics in describing explaining and predicting empirical phenomena Does phenomenology allow better understanding of the principle of gauge invariance at the core of the standard model of contemporary particle physics Does the phenomenological notion of Lifeworld stand in opposition to the scientific metaphysics movement or is there potential for dialogue Part 3 examines the measurement problem Is the solution outlined by Fritz London and Edmond Bauer merely a re statement of von Neumann s view or should it be regarded as a distinctively phenomenological take on the measurement problem Is phenomenology a serious contender in continuing discussions of foundational questions of quantum mechanics Can other interpretational frameworks such as quantum Bayesianism benefit from implementing phenomenological notions such as constitution or horizontal intentionality
