Longterm Environmental Change In Arctic And Antarctic Lakes:

Long-term Environmental Change in Arctic and Antarctic Lakes Reinhard Pienitz, Marianne S.V. Douglas, John P. Smol, 2007-11-08 Concerns about the effects of global climate change have focused attention on the vulnerability of circumpolar regions Long term historical data are needed to better understand the magnitude and direction of environmental change related to both natural and anthropogenic causes as well as to assess patterns of natural variability The paucity of instrumental data requires that proxy methods be used The abundance of lakes throughout the Arctic and Antarctic makes paleolimnological approaches especially powerful tools to assist interpretations of environmental change This book provides a synthesis of the broad spectrum of techniques available for generating long term environmental records from circumpolar lakes It also provides overviews of the geographic extent of paleolimnological work completed thus far in these regions It explores the diverse ways in which paleolimnology is used to address the pressing and emerging environmental issues of high latitude regions By providing both an introduction and in depth reviews this volume is of interest to students and advanced researchers alike who are studying earth atmospheric and environmental sciences

Thomas,2021-01-26 The Arctic is often portrayed as being isolated but the reality is that the connectivity with the rest of the planet is huge be it through weather patterns global ocean circulation and large scale migration patterns to name but a few There is a huge amount of public interest in the changing Arctic especially in terms of the rapid changes taking place in ecosystems and exploitation of resources There can be no doubt that the Arctic is at the forefront of the international environmental science agenda both from a scientific aspect and also from a policy environmental management perspective This book aims to stimulate a wide audience to think about the Arctic by highlighting the remarkable breadth of what it means to study its ecology Arctic Ecology seeks to systematically introduce the diverse array of ecologies within the Arctic region As the Arctic rapidly changes understanding the fundamental ecology underpinning the Arctic is paramount to understanding the consequences of what such change will inevitably bring about Arctic Ecology is designed to provide graduate students of environmental science ecology and climate change with a source where Arctic ecology is addressed specifically with issues due to climate change clearly discussed It will also be of use to policy makers researchers and international agencies who are focusing on ecological issues and effects of global climate change in the Arctic About the Editor David N Thomas is Professor of Arctic Ecosystem Research in the Faculty of Biological and Environmental Sciences University of Helsinki Previously he spent 24 years in the School of Ocean Sciences Bangor University Wales He studies

Climate Variability through Europe and Africa Richard W. Battarbee,Françoise Gasse,Catherine E. Stickley,2007-11-06 This book provides a major synthesis of evidence for past climate variability at the regional and continental scale across Europe and Africa It focuses on two complementary time scales the Holocene approximately the last 11 500 years and the last glacial interglacial cycle approximately the last 130 000 years An overview of the climate system of the past has never been attempted before on this scale and as such the volume represents a benchmark for future research It is written by an expert group of climate change scientists and presents an insight into past climate variability that challenges climatologists who seek to explain climate dynamics of the past and provides climate modellers with a work of reference for data model comparison The book is an advanced but very readable text essential for all students and scientists interested in global environmental change **Earth Paleoenvironments: Records Preserved in Mid- and Low-Latitude Glaciers**

L.DeWayne Cecil,Jaromy R. Green,Lonnie G. Thompson,2006-04-11 Glaciers provide an unparalleled tool for studying global environmental change This book is the first of its kind concentrating on the paleoenvironmental record archived in mid and low latitude glaciers By concentrating mainly on the last 500 years of these records we can now see that laws enacted to protect our environment in Europe and North America are providing positive results Documenting global mid and low latitude paleoenvironmental records in glaciers this volume forms a timely and essential complement to the wealth of literature on polar and Greenland ice sheet records This text is directed towards undergraduate and graduate university audiences and forms an ideal supplement in courses dealing with climate and global environmental change glaciology and natural resources management It is also suitable in helping teach application of innovative analytical and interpretive methods and would be an excellent example of the rapidly emerging discipline of Forensic Earth Science

Lochnagar Neil L. Rose, 2007-06-01 Previous volumes in this Developments in Paleoenvironmental Research DPER series have focussed on providing in depth descriptions of palaeoenvironmental techniques or have described the applications of these approaches on various regional bases The former of these now provide an invaluable series of standard text books for scientists and students while the latter show how the application of palaeo techniques can be used across broad geographical scales In this current volume we have attempted something a little different Not only are a variety of palaeo techniques applied to a single small lake but we have tried to show how these methods and the data derived from them can be integrated synergistically with contemporary monitoring and predictive modelling The acidification and metals research provide two good examples of this Along with other upland lakes across the UK the early research work at Lochnagar was based on assessing the competing hypotheses for the causes of surface water acidification As a result palaeolimnological techniques were used to assess the timing and extent of pH changes over hundreds of years The subsequent establishment of the UK Acid Waters Monitoring Network UK AWMN then allowed a range of biological and chemical parameters to be assessed routinely in order to determine the rate at which the lakes and streams including Lochnagar were recovering following emissions reductions
