Mass Spectrometry Of Lipids:

Lipidomics Xianlin Han, 2016-03-29 Covers the area of lipidomics from fundamentals and theory to applications Presents a balanced discussion of the fundamentals theory experimental methods and applications of lipidomics Covers different characterizations of lipids including Glycerophospholipids Sphingolipids Glycerolipids and Glycolipids and Fatty Acids and Modified Fatty Acids Includes a section on quantification of Lipids in Lipidomics such as sample preparation factors affecting accurate quantification and data processing and interpretation Details applications of Lipidomics Tools including for Health and Disease Plant Lipidomics and Lipidomics on Cellular Membranes Tandem Mass Spectrometry of Lipids Robert C Murphy, 2014-12-02 The emerging field of lipidomics has been made possible because of advances in mass spectrometry and in particular tandem mass spectrometry of lipid ions generated by electrospray ionization The ability to carry out basic biochemical studies of lipids using electrospray ionization is predicated upon understanding the behaviour of lipid derived ions following collision induced decomposition and mechanisms of product ion formation During the past 20 years a wealth of information has been generated about lipid molecules that are now analysed by mass spectrometry however there is no central source where one can obtain basic information about how these very diverse biomolecules behave following collisional activation This book brings together in one volume this information so that investigators considering using tandem mass spectrometry to structurally characterize lipids or to quantitate their occurrence in a biological matrix will have a convenient source to review mechanism of decomposition reactions related to the diversity of lipid structures A separate chapter is devoted to each of seven major lipid classes including fatty acids eicosanoids and bioactive lipid mediators fatty acyl esters and amides glycerol esters glycerophospholipids sphingolipids and steroids Mechanistic details are provided for understanding the pathways of formation of major product ions and ions used for structural characterization In most cases specific ancillary information has been critical to understand the pathways including isotope labeling and high resolution analysis of precursor and product ions For a few specific examples such data is missing and pathways are proposed as a means to initiate further mass spectral experiments to prove or disprove pathway hypotheses While this work largely centres on the lipid biochemistry of animal mammalian systems general principles can be taken from the specific examples and applied to lipid biochemistry found in plants fungi prokaryotes and archeal organisms **Lipidomics and Bioactive Lipids: Mass Spectrometry Based Lipid Analysis**, 2007-11-26 This volume in the well established Methods in Enzymology series features methods for the study of lipids using mass spectrometry techniques Articles in this volume cover topics such as Qualitative Analysis and Quantitative Assessment of Changes in Neutral Glycerol Lipid Molecular Species within Cells Glycerophospholipid identification and quantitation by electrospray ionization mass spectrometry Detection and Quantitation of Eicosanoids via High Performance Liquid Chromatography Electrospray Ionization Mass Spectrometry Structure specific quantitative methods for lipidomic analysis of sphingolipids by tandem mass spectrometry Analysis of Ubiquinones Dolichols

and Dolichol Diphosphate Oligosaccharides by Liquid Chromatography Electrospray Ionization Mass Spectrometry Extraction and Analysis of Sterols in Biological Matrices by High Performance Liquid Chromatography Electrospray Ionization Mass Spectrometry The Lipid Maps Initiative in Lipidomics Basic analytical systems for lipidomics by mass spectrometry in Japan The European Lipidomics Initiative Enabling technologies Lipidomic analysis of Signaling Pathways Bioinformatics for Lipidomics Mediator Lipidomics Search Algorithms for Eicosanoids Resolvins and Protectins A guide to biochemical systems modeling of sphingolipids for the biochemist and Quantitation and Standardization of Lipid Internal Standards for Mass Spectroscopy *Lipidomics* William Griffiths, Yuqin Wang, 2020-01-13 Lipidomics is one of the emerging omics techniques with growing importance in bioscience Discussing interesting standard and non standard techniques relevant to the measurement and analysis of lipids by mass spectrometry this book will provide a guide to the possibilities of the techniques It will introduce the reader to exciting new methods that allow isomer differentiation improve sensitivity allow spatial location and go beyond annotation of simply matching a mass to a database entry The book is written and edited by the some of the world leaders in the field of lipid mass spectrometry and will have international appeal in industry and academia for analytical chemists biochemists and biotechnologists Furthermore it will provide a useful resource for anyone interested in lipid structure characterization particularly for graduates and postgraduates who require a starting point for their projects

Lipids in Health and Disease Peter Quinn, Xiaoyuan Wang, 2008-08-27 Lipids are functionally versatile molecules They have evolved from relatively simple hydrocarbons that serve as depot storages of metabolites and barriers to the permeation of solutes into complex compounds that perform a variety of signalling functions in higher organisms This volume is devoted to the polar lipids and their constituents We have omitted the neutral lipids like fats and oils because their function is generally to act as deposits of metabolizable substrates The sterols are also outside the scope of the present volume and the reader is referred to volume 28 of this series which is the subject of cholesterol The polar lipids are comprised of fatty acids attached to either glycerol or sphingosine The fatty acids themselves constitute an important reservoir of substrates for conversion into families of signalling and modulating molecules including the eicosanoids amongst which are the prostaglandins thromboxanes and leucotrienes The way fatty acid metabolism is regulated in the liver and how fatty acids are desaturated are subjects considered in the first part of this volume This section also deals with the modulation of protein function and inflammation by unsaturated fatty acids and their derivatives New insights into the role of fatty acid synthesis and eicosenoid function in tumour progression and metastasis
