Historical Dictionary of the Discovery and Exploration of the Northwest Coast of America Robin Inglis, 2008-04-02 The Northwest Coast of America ranging from northern California through Oregon Washington and British Columbia all the way up to Alaska was the last temperate coastline to be placed on the world map First visited by Russians in

1741 and thought to contain a navigable passage between the Pacific and the Atlantic it was systematically revealed during an intense period of exploratory and commercial activity from the 1770s to the 1790s Subsequently the imperial ambitions of Russia Spain and Britain and an assumption of manifest destiny by the United States led to further exploration and ensured that the region would become disputed territory before national boundaries were determined in the mid 19th century The Historical Dictionary of the Discovery and Exploration of the Northwest Coast of America tells of the heroic endeavors and remarkable achievements the endless speculation about a northwest passage and the fighting and manipulation for commercial advantage that surrounded this terrain This is done through an introductory essay a detailed chronology an extensive bibliography modern maps and selected historical maps and drawings and over 400 cross referenced dictionary entries Entries cover the native people encountered the scientists and artists who left an invaluable documentary and visual record of people places flora and fauna the numerous voyages taken by men such as Vitus Bering James Cook Juan Francisco de la Bodega y Quadra and George Vancouver overland expeditions like those of Alexander Mackenzie Simon Fraser Meriwether Lewis and William Clark and David Thompson and maritime fur traders including George Dixon Grigori Shelikhov Robert Gray and William Sturgis No other dictionary exists that is dedicated solely to the coverage of this region

Song Regained Margarita Alexandrou,Chris Carey,Giovan Battista D'Alessio,2022-01-19 Apart from relatively few exceptions of texts which survive intact what we have of Ancient Greek literature remains to a great degree fragmentary As a result it is often misread overlooked or mined not for its own sake but to support the investigation of texts which survive in their entirety This collection of chapters addresses a range of poetic fragments with a strong though not exclusive focus on Archaic epic and lyric and an emphasis on the papyrological tradition Its main purpose is to showcase effective methodologies through case studies through a hands on approach assisted by a robust theoretical underpinning The topics covered include textual criticism the editing of fragmentary corpora the role of palaeography and the physical features of writing materials the study of ancient editions annotations and paraliterary texts matters of indirect or mixed tradition and fragment placement and attribution This volume will certainly be a rewarding read intended equally for new researchers who wish to acquire or improve the skills needed to deal with fragmentary texts and for established scholars who may draw on the authors insights to navigate the field improving their experience and enriching their knowledge **New Spaces of**

Exploration Simon Naylor,James R. Ryan,2009-12-18 For many the dawn of the twentieth century ushered in an era where the world map had few if any blank spaces left to discover The age of exploration was supposedly dead New Spaces of Exploration challenges this assumption Focusing specifically on exploration in the twentieth century the authors demonstrate how new technologies and changing geopolitical configurations have ensured that exploration has remained a key feature of our rapidly globalizing world Ranging widely in their geographical focus from the Europe and Asia to Australia and from the

polar regions to outer space they demonstrate the increasing diversity of modern exploration and reveal the continuing political military industrial and cultural motivations at play The result is a major contribution to our understanding of the significance of exploration in the twentieth century Contributors include E Baigent C Collis K Dodds F Driver M Godwin J Hill F Korsmo F MacDonald S Naylor J Ryan N Thomas and K Yusoff Science and Empire B. Bennett,J. Hodge,2011-09-13 Offering one of the first analyses of how networks of science interacted within the British Empire during the past two centuries this volume shows how the rise of formalized state networks of science in the mid nineteenth century led to a constant tension between administrators and scientists *Final Report of the State Geologist* New Jersey Geological Survey,Geological Survey of New Jersey,1910 **Final Report** New Jersey Geological Survey,New Jersey. State Geologist,1910 The Oxford Companion to World Exploration: A-L ,2007 *An Introduction to Geophysical Exploration* Philip Kearey,Michael Brooks,Ian Hill,2013-04-16 This new edition of the well established Kearey and Brooks text is fully updated to reflect the important developments in geophysical methods since the production of the previous edition The broad scope of previous editions is maintained with even greater clarity of explanations from the revised text and extensively revised figures Each of the major geophysical methods is treated systematically developing the theory behind the method and detailing the instrumentation field data acquisition techniques data processing and interpretation methods The practical application of each method to such diverse exploration applications as petroleum groundwater engineering environmental and forensic is shown by case histories The mathematics required in order to understand the text is purposely kept to a minimum so the book is suitable for courses taken in geophysics by all undergraduate students It will also be of use to postgraduate students who might wish to include geophysics in their studies and to all professional geologists who wish to discover the breadth of the subject in connection with their own work **Final Report of the State Geologist** New Jersey. Division of Geology and Waters,1910 Final Report of the State Geologist: Iron mines and mining in New Jersey, by W.S. Bayley New Jersey Geological Survey,1910 **Oxford Atlas of Exploration** John Hemming,Oxford University Press,George Philip & Son,1997 **The Great Ages of Discovery** Stephen J. Pyne,2021-02-23 For more than 600 years Western civilization has relied on exploration to learn about a wider world and universe The Great Ages of Discovery details the different eras of Western exploration in terms of its locations its intellectual contexts the characteristic moral conflicts that underwrote encounters and the grand gestures that distill an age into its essence Historian and MacArthur Fellow Stephen J Pyne identifies three great ages of discovery in his fascinating new book The first age of discovery ranged from the early 15th to the early 18th century sketched out the contours of the globe aligned with the Renaissance and had for its grandest expression the circumnavigation of the world ocean The second age launched in the latter half of the 18th century spanning into the early 20th century carrying the Enlightenment along with it pairing especially with settler societies and had as its prize achievement the crossing of a continent The third age began after World War II and pivoting from Antarctica pushed

into the deep oceans and interplanetary space Its grand gesture is Voyager s passage across the solar system Each age had in common a galvanic rivalry Spain and Portugal in the first age Britain and France followed by others in the second and the USSR and USA in the third With a deep and passionate knowledge of the history of Western exploration Pyne takes us on a journey across hundreds of years of geographic trekking The Great Ages of Discovery is an interpretive companion to what became Western civilization s quest narrative with the triumphs and tragedies that grand journey brought the legacies of which are still very much with us The Oxford Companion to World Exploration: M-Z, index David Buisseret,2007 Contains cross referenced articles arranged alphabetically from Donald Mackay to Zheng He on topics of land space and sea exploration and provides biographical profiles of notable explorers throughout history Includes a topical outline of entries and a directory of contributors
