ing their geometrical relationships. Figure 25-2 illustrates two surfaces that subtend the same solid angle. An ideal luminous source (a point source) will radiate in all directions. Therefore, at any distance  $r$  from the source one may create a sphere of radius  $r$ . The surface area of a sphere is  $4\pi r^2$ . A steradian (sr) is a solid angle subtended by a portion of the spher-

ical area equal to  $r^2$ . Therefore, there are  $4\pi$  steradians in a sphere.

As light radiates from the source, the amount of light (*luminous flux* or power,  $\Phi$ ) passing through one steradian is always the same, as can be seen for the two surfaces in Figure 25-2. If the point source has a luminance of 1 candela (cd), the luminous flux

Uttal, 2014-06-27 Originally published in 1973 this book deals with what were even at that time the well known neural coding processes of the sensory transmission processes The book was written to demonstrate the common features of the various senses It concentrates on the most peripheral neural aspects of the senses starting with the physical transduction process and culminating in the arrival of signals at the brain *The Uttal Tetralogy of Cognitive Neuroscience* William R. Uttal, 2022-07-30 These four volumes originally published between 1973 and 1988 were intended to provide a broad survey of cognitive neuroscience a field known variously as physiological psychology or psychobiology in the 1970s and 1980s when the books were written The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics Out of print for

many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes
