## Simulation

Once the amount of radiation to be given has been accurately calculated, the patient then goes to the simulator to determine what settings are to be selected for the actual treatment using a linear accelerator.

The settings are determined by taking a series of x-rays to make sure that the tumour is in the correct position ready to receive the ionising radiation.

*Knowledge-based Radiotherapy Treatment Planning* Lindsey Appenzoller Olsen, 2015 Knowledge based planning KBP has become a prominent area of research in radiation oncology in the last five years The development of KBP aims to address the

lack of systematic quality control and plan quality variability in radiotherapy treatment planning by providing achievable patient specific optimization objectives derived from a model trained with a cohort of previously treated site specific plans This dissertation intended to develop evaluate and implement a knowledge based planning system to reduce variability and improve radiotherapy treatment plan quality The project aimed to 1 develop and validate an algorithm to train mathematical models that predict dose volume histograms for organs at risk in radiotherapy planning 2 implement the algorithm into a software application in order to transfer the technology into clinical practice and 3 evaluate the impact of the software system algorithm application on reducing variability and improving radiotherapy treatment plan quality through knowledge transfer The presented work demonstrates that a KBP model is beneficial to radiotherapy planning The developed models adequately describe what is dosimetrically achievable for patient specific anatomy and have proven useful in outlier detection for quality control of radiotherapy planning The KBP paradigm has also demonstrated ability to improve treatment plan quality through benchmarking and transfer of knowledge between institutions

**Therapy of Cancer** J. M. Vaeth, J. L. Meyer, 1987-02-24      The Physics of Three Dimensional Radiation Therapy S. Webb, 1993-01-01

The Physics of Three Dimensional Radiation Therapy presents a broad study of the use of three dimensional techniques in radiation therapy. These techniques are used to specify the target volume precisely and deliver radiation with precision to minimize damage to surrounding healthy tissue. The book discusses multimodality computed tomography, complex treatment planning software, advanced collimation techniques, proton radiotherapy, megavoltage imaging, and stereotactic radiosurgery. A review of the literature, numerous questions, and many illustrations make this book suitable for teaching a course. The themes covered in this book are developed and expanded in Webb's The Physics of Conformal Radiotherapy, and the two may be used together or in successive semesters for teaching purposes.
