Educating the Engineer of 2020 National Academy of Engineering,2005-10-06 Educating the Engineer of 2020 is grounded by the observations questions and conclusions presented in the best selling book The Engineer of 2020 Visions of Engineering in the New Century This new book offers recommendations on how to enrich and broaden engineering education so graduates are better prepared to work in a constantly changing global economy It notes the importance of

improving recruitment and retention of students and making the learning experience more meaningful to them It also discusses the value of considering changes in engineering education in the broader context of enhancing the status of the engineering profession and improving the public understanding of engineering Although certain basics of engineering will not change in the future the explosion of knowledge the global economy and the way engineers work will reflect an ongoing evolution If the United States is to maintain its economic leadership and be able to sustain its share of high technology jobs it must prepare for this wave of change

Messaging for Engineering National Academy of Engineering, Committee on Implementing Engineering Messages, 2013-07-21 For those in the broad engineering community those who employ work with and or educate engineers and engineers themselves there is no need to explain the importance and value of engineering They understand that engineers help make the world a better place for all that they regularly grapple with important societal and environmental issues and that the engineering process is every bit as creative as composing a symphony or crafting a piece of art But the situation outside the engineering community is quite different Studies have shown that most K 12 students and teachers have a limited appreciation of all the ways that engineering makes their lives better and furthermore that they have little understanding of what engineers do or of the opportunities that an engineering education offers Messaging for Engineering supports efforts by the engineering community to communicate more effectively about the profession and those who practice it This report builds on the 2008 NAE publication Changing the Conversation Messages for Improving Public Understanding of Engineering CTC which presented the results of a research based effort to develop and test new more effective messages about engineering The new messages cast engineering as inherently creative and concerned with human welfare as well as an emotionally satisfying calling This report summarizes progress in implementing the CTC messages but also recognizes that there is potential to galvanize additional action and thus suggests specific steps for major players in the engineering community to continue and build on progress to date Many of the report s recommendations resulted from discussion at a December 2010 committee workshop that involved several dozen high level decision makers representing key stakeholder groups in the engineering community

Cardella, 2014-11-15 In science technology engineering and mathematics STEM education in pre college engineering is not the silent e anymore There is an accelerated interest in teaching engineering in all grade levels Structured engineering programs are emerging in schools as well as in out of school settings Over the last ten years the number of states in the US including engineering in their K 12 standards has tripled and this trend will continue to grow with the adoption of the Next Generation Science Standards The interest in pre college engineering education stems from three different motivations First from a workforce pipeline or pathway perspective researchers and practitioners are interested in understanding precursors influential and motivational factors and the progression of engineering thinking Second from a general societal perspective technological literacy and understanding of the role of engineering and technology is becoming increasingly important for the general populace and it is more imperative to foster this understanding from a younger age Third from a STEM integration and education perspective engineering processes are used as a context to teach science and math concepts This book addresses each of these motivations and the diverse means used to engage with them Designed to be a source of background and inspiration for researchers and practitioners alike this volume includes contributions on policy synthesis studies and research studies to catalyze and inform current efforts to improve pre college engineering education The book explores teacher learning and practices as well as how student learning occurs in both formal settings such as classrooms and informal settings such as homes and museums This volume also includes chapters on assessing design and creativity **The Role of the National Academies** United States.
