Biorefinery Production Technologies for Chemicals and Energy Arindam Kuila,Mainak Mukhopadhyay,2020-10-21 This book covers almost all of the diverse aspects of utilizing lignocellulosic biomass for valuable biorefinery product development of chemicals alternative fuels and energy The world has shifted towards sustainable development for the generation of energy and industrially valuable chemicals Biorefinery plays an important role in the integration of conversion process with high end equipment facilities for the generation of energy fuels and chemicals The book is divided into four parts The first part Basic Principles of Biorefinery covers the concept of biorefinery its application in industrial bioprocessing the utilization of biomass for biorefinery application and its future prospects and economic performance The second part Biorefinery for Production of Chemicals covers the production of bioactive compounds gallic acid C4 C5 and C6 compounds etc from a variety of substrates The third part Biorefinery for Production of Alternative Fuel and Energy covers sustainable production of bioethanol biodiesel and biogas from different types of substrates The last part of this book discusses sequential utilization of wheat straw material balance and biorefinery approach The approaches presented in this book will help readers users from different areas like process engineering and biochemistry to plan integrated and inventive methods to trim down the expenditure of the industrial manufacture process to accomplish cost effective feasible products in biorefinery

Food Additives Data Book Jim Smith,Lily

Hong-Shum, 2011-04-20 The use of additives in food is a dynamic one as consumers demand fewer additives in foods and as governments review the list of additives approved and their permitted levels. Scientists also refine the knowledge of the risk assessment process as well as improve analytical methods and the use of alternative additives processes or ingredients. Since the first edition of the Food Additives Databook was published there have been numerous changes due to these developments and some additives are no longer permitted, some have new permitted levels of use and new additives have been assessed and approved. The revised second edition of this major reference work covers all the must have technical data on food additives. Compiled by food industry experts with a proven track record of producing high quality reference work, this volume is the definitive resource for technologists in small, medium and large companies and for workers in research, government and academic institutions. Coverage is of Preservatives, Enzymes, Gases, Nutritive additives, Emulsifiers, Flour additives, Acidulants, Sequestrants, Antioxidants, Flavour enhancers, Colour, Sweeteners, Polysaccharides, Solvents. Entries include information on Function and Applications, Safety issues, International legal issues, Alternatives, Synonyms, Molecular Formula and mass, Alternative forms, Appearance, Boiling, melting and flash points, density, purity, water content, solubility, Synergists, Antagonists and more, with full and easy to follow up references. Reviews of the first edition. Additives have their advantages for the food industry in order to provide safe and convenient food products. It is therefore essential that as much information as possible is available to allow an informed decision on the selection of an additive for a particular purpose. This data book provides such information consisting of over 1000 pages and covering around 350 additives. This data book does provide a vast amount of information, it is what it claims to be. Overall, this is a very useful publication and a good reference book for anyone working in the food and dairy industry. International Journal of Dairy Technology, Volume 59, Issue 2, May 2006. This book is the best I have ever seen, a clear winner over all other food additive books, a superb edition. SAAFOST, South African Association for Food Science and Technology.

Bioactive Compounds in Foods John Gilbert, Hamide Şenyuva, 2009-01-21 Inherent toxicants and processing contaminants are both non-essential bioactive substances whose levels in foods can be difficult to control. This volume covers both types of compound for the first time, examining their beneficial as well as their undesirable effects in the human diet. Chapters have been written as individually comprehensive reviews and topics have been selected to illustrate recent scientific advances in understanding of the occurrence and mechanism of formation, exposure, risk assessment and developments in the underpinning analytical methodology. A wide range of contaminants are examined in detail, including pyrrolizidine alkaloids, glucosinolates, phycotoxins and mycotoxins. Several process contaminants, e.g. acrylamide and furan, which are relatively new but which have a rapidly growing literature, are also covered. The book provides a practical reference for a wide range of experts: specialist toxicologists, chemists and food chemists, hygienists, government officials and anyone who needs to be aware of the main issues concerning toxicants and process contaminants in food. It will also be a valuable introduction to the subject for post graduate students.

Food Biodeterioration and Preservation Gary S.

Tucker,2008-04-30 Biodeterioration can be defined as the breakdown of food by agents of microbiological origin either directly or from products of their metabolism Microbiological sources can be present in foods prior to packaging or on the surfaces of packaging materials The shelf life and safety of the food will depend on the type and quantity of microorganism as well as the hurdles to their growth offered by various preservation techniques This book discusses how the agents of food biodeterioration operate and examines the commercially used industrial methods available to control them allowing the production of safe and wholesome foods There is an emphasis on the equipment employed to carry out the various methods of preservation The introductory chapter describes in detail the microorganisms and mechanisms of food breakdown intrinsic to various key food types dairy meat and fish fruit and vegetables Direct microorganism action will be covered in addition to enzymatic breakdown The second chapter addresses HACCP including food safety legislation Subsequent chapters outline the principal commercially used methods of preserving foods These chapters follow a common structure theoretical background flow sheets of operations food preparation processing equipment special features of hygiene packaging shelf life and product safety Food Biodeterioration and Preservation is directed at food scientists and technologists in industry and academia Since it covers all the commonly used methods of food preservation it will be relevant across the entire food manufacturing industry
