Aerospace Safety Reentry Analytical and Experimental Program SNAP 2 and 10A R. D. Elliott, 1963 Guernsey Breeders' Journal, 1910 **Re-entry and Planetary Entry Physics and Technology** W.H.T. Loh, 2013-11-11 During the last decade a rapid growth of knowledge in the field of re entry and planetary entry has resulted in many significant advances useful to the student engineer and scientist The purpose of offering this course is to make available to them these recent significant advances in physics and technology Accordingly this course is organized into five parts Part 1 Entry Dynamics Thermodynamics Physics and Radiation Part 2 Entry Ablation and Heat Transfer Part 3 Entry Experimentation Part 4 Entry Concepts and Technology and Part 5 Advanced Entry Programs It is written in such a way so that it may easily be adopted by other universities as a textbook for a two semesters senior or graduate course on the subject In addition to the undersigned who served as the course instructor and wrote Chapters 1 2 3 and 4 guest lecturers included Prof FRANKLIN K MOORE who wrote Chapter 5 Entry Radiative Transfer Prof SHIH I PAI who wrote Chapter 6 Entry Radiation Magnetogas dynamics Dr CARL GAZLEY Jr who wrote Chapter 7 Entry Deceleration and Mass Change of an Ablating Body Dr SINCLAIRE M SCALA who wrote Chapter 8 Entry Heat Transfer and Material Response Mr SALT II agreement United States. Department of State. Bureau of Public Affairs, 1979 **Interpretation of Microwave Antenna Results from a Reentry Flight Test** John F. Lennon, 1974 This is one of a series of reports on the Trailblazer II program The particular aspect treated here involves the unmodified expansion region plasma and its effect on an antenna located on the vehicle shoulder This report describes some of the theoretical approaches used discusses the levels of approximation involved and shows the agreement between these various methods and the test data The failure of a single set of assumptions to yield consistent agreement over a range of altitudes confirms the need to adopt flow models appropriate to the changing regimes encountered during reentry One significant conclusion is that performance characteristics such as reflection and interantenna coupling which depend mostly on the level of peak electron density can be represented by simple plane wave as well as by the more sophisticated slot antenna models The latter approach however is necessary to describe propagation across the entire plasma sheath
