Satellite DNA Thengiz Beridze, 2013-11-11 The organization of genomes in higher organisms has been studied extensively in recent years. With current achievements in gene engineering it seems quite realistic that they will be specifically modified in the nearest future to produce new economically valuable forms of animals and plants. The success of these experiments will depend greatly on the level of our knowledge of the structural features of plant and animal DNAs. Comparative studies of DNA from different organisms began with discovery of its genetic significance in the late 1950s. A few years later it was found that nuclear DNA, the main storage of genetic information, consists of several fractions differing in some physical and chemical properties. Along with the major DNA bearing the main load during the genotype functioning, the so-called satellite DNAs were discovered. T. G. Beridze, the author of this book, is one of the pioneers in the study of these extraordinary DNAs. The results of his experiments with plant satellite DNAs have essentially influenced the formation of our current ideas on their structure and properties.

Satellite DNAs in Physiology and Evolution Đurđica Ugarković, 2021-08-13 This book gives a comprehensive overview of the unique roles that non-coding repetitive elements such as satellite DNAs play in different physiological and evolutionary processes. It presents the gene regulatory aspect of satellite DNAs in different model systems including mammals, insects, and plants. In addition, evolutionary aspects of activation of satellite DNAs in terms of transcription and proliferation are highlighted, revealing the role of satellite DNAs in the process of adaptation to changing environment and in the speciation process. Finally, the book discusses satellite DNA activation during pathological transformation and the mechanisms by which they affect disease progression. Namely, some satellite DNAs promote the oncogenic processes by affecting genome epigenetic regulation as well as genome integrity. Readers get a full overview of the latest research on satellite DNA.

Heterochromatin Ram Sagar Verma, 1988-05-27 The material included in *Heterochromatin* is impressively comprehensive and provides timely authoritative information that would otherwise be difficult to obtain.

Repetitive DNA M. A. Garrido-Ramos, 2012-06-27 The experimental data that have been generated using new molecular techniques associated with the completion of genome projects have changed our perception of the structural features, functional implications, and evolutionary dynamics of repetitive DNA sequences. This volume of *Genome Dynamics* provides a valuable update on recent developments in research into multigene families, centromeres, telomeres, microsatellite DNA, satellite DNA, and transposable elements. Each chapter presents a review by distinguished experts and analyzes repetitive DNA diversity and abundance as well as the impact on genome structure, function, and evolution. This publication is targeted at scientists and scholars at every level, from students to faculty members, and indeed anyone involved or interested in genetics, molecular evolution, molecular biology, as well as genomics will find it a valuable source of up-to-date information.

Long Non-Coding RNAs Durdica Ugarkovic, 2011-02-01 Long non coding RNAs lncRNAs tentatively defined as ncRNAs of more than two hundred nucleotides in length are characterized by the complexity and diversity of their sequences and mechanisms of action Based on genome wide studies more than 3 300 of them exist but to date only the limited number of functional lncRNAs have been identified and characterized Nonetheless lncRNAs have emerged as key molecules involved in the control of transcriptional and posttranscriptional gene regulatory pathways They take part in the recruitment of chromatin modifying complexes and regulate splicing localization stability and translation of the target mRNAs This book provides an overview of the rapidly advancing field of long ncRNAs describing the epigenetic and non epigenetic mechanisms by which they regulate various biological functions in model systems from yeast to mammals The role of ncRNAs in sex chromosome dosage compensation in flies and mammals is described as well as their role in centromere and telomere biology Long non coding RNAs involved in environmental stress response and development are presented and their mechanisms of action discussed
