Behavioral Aspects of AIDS David G. Ostrow,2013-06-29 As we enter the last decade of the twentieth century the AIDS epidemic looms ever larger and threatening The specter of upwards of a million deaths in the United States and perhaps many millions worldwide from a sexually transmitted virus shakes our belief in modern medical science while challenging the foundations of democratic society Almost ten years into the epidemic and with an enormous body of basic science research on the Human Immunodeficiency Virus HIV we still do not know why AIDS emerged when it did or how to stop its spread A very humbling experience for scientists clinicians public health experts politicians and the general public Yet there are signs that a well coordinated multidisciplinary research program can conquer the epidemic and perhaps

provide the basis for preventing future epidemics The HIV family of viruses is now better understood both in terms of structure and function than any other virus Genetically engineered peptides and nucleic acids are being tested as specific treatments or vaccines against HIV infection disease Most promising are the strides which have been made in understanding those aspects of human behavior which have contributed to the spread of HIV infection and which must be substantially modified if AIDS is to be controlled and eventually eradicated The basis of that understanding has roots in a diverse set of disciplines which have converged in the work presented in this book **Psychovenereology** Michael W. Ross, 1986

Psychovenereology investigates the psychological factors in human disease i.e. personality and lifestyle and their effect on the rate of contraction of sexually transmitted diseases It also describes the associated illnesses among people who contract sexually related disease and how social mores affect the individual's perception of the disease and how that perception in turn affects compliance with treatment The book also addresses the whole chain of events ranging from high risk behavior and its psychological determinants to the direct causes of infections and their psychological implications Concentrating on the homosexual male this book describes the growing field of psychovenereology and suggests educational and preventative techniques which can help break the psychological patterns of infection related behavior **Sexually Transmitted**

Bacterial Infections of Humans Alfred S. Evans, 2013-04-18 This is a companion volume to *Viral Infections of Humans Epidemiology and Control* The apparent success of that book in bridging the gap between texts on basic microbiology and those on clinical infectious diseases led to editing this one on bacterial infections the chapters of which are organized in exactly the same format of 12 units introduction historical background methodology biological characteristics of the organism descriptive epidemiology mechanisms and

routes of transmission pathogenesis and immunity patterns of host response control and prevention unresolved problems
 references and suggested reading The purpose of this book is to provide a description and understanding of the pathogenesis
 of infection and disease both within the community and within the individual This is done in the belief that a variety of factors
 in both the external and the internal environment and in the nature of the infectious agent influence exposure the
 development of infection and the pattern of the host response An understanding of the epidemiology and pathogenesis of
 these processes forms the basis for approaches to control and prevention The first two chapters of this book deal with
 general epidemiological concepts and with surveillance Male Homosexual Behavior and the Effects of AIDS Education B
 R Simon Rosser, 1991-11-30 Since the AIDS epidemic was recognized information on safer sex has been assumed to be the
 most crucial means of preventing further spread of the disease But how well has AIDS education worked What kinds of
 education work best and for whom This study is the first to provide an in depth analysis of the results of AIDS education
 programs and to explore the psychosocial factors that affect behavioral responses to education B R Simon Rosser provides a
 detailed profile of a specific population at risk including factors such as sexual behavior psychology religious affiliation legal
 status and discrimination Using comparative measures of behavior personality social status attitudes and risk taking he
 identifies important differences between homosexual men who engage in safer sex and those who do not Finally he evaluates
 the impact of different approaches to AIDS education Examining both positive and negative effects Rosser shows that the
 spread of the HIV virus was actually accelerated by a national education campaign utilizing fear and contrasts this result
 with four international gay sensitive education campaigns that produced positive changes in behavior and lifestyle He
 discusses ways in which AIDS education must develop in order to become more effective together with crucial changes that
 are needed in both the gay population and the larger community if HIV transmission is to be halted This study is a valuable
 resource for education and research in AIDS prevention sexual behavior psychovenereology education health and related
