Hackney,2016-11-09 It is well established through extensive peer reviewed published research that physical activity and exercise training can impact the reproductive endocrine system of women This ground breaking comprehensive title presents

a range of unique insights into the opposite question how the reproductive endocrine system of women affects their exercise ability More precisely the thematic question explored in this work is if exercise affects reproductive hormones conversely then could the reproductive hormones have physiological effects unrelated to reproduction that influence the capacity of women to exercise In exploring this question the goal is to better understand the unique physiology of women and whether female sex hormones might account for some of the variance in physiological performance between amenorrheic and eumenorrheic women and within women across the age span as they experience menarche to menopause Sex Hormones Exercise and Women Scientific and Clinical Aspects synthesizes the research by exploring the physiology and psychology behind these occurrences This novel title will not only be of interest to researchers exercise scientists graduate students and clinicians it will also serve as a source of valuable information for female athletes and their trainers in the context of preparing for competitions

Magic and the Will to Science Agnes Horvath, 2024-03-19 This book offers a political anthropological perspective on the problematic character of science combining insights from historical sociology political theory and cultural anthropology Its central idea departing from the works of Frances Yates and the Gnosticism thesis of Eric Voegelin is that far from being the radical opposite of magic modern science effectively grew out of magic and its varieties like alchemy Hermetic philosophy the occult Gnosticism and Neoplatonism Showing that the desire to use science to solve various real or presumed problems of human existence has created a permanent liminal crisis it contends that the will to science is parasitic existing as it does in sheer relationality outside of and in between concrete places and communities A study of the mutual relationship between magic and science in different historical eras ranging from the Early Neolithic to recent disease prevention ideas *Magic and the Will to Science* will appeal to scholars and students of social and anthropological theory and the philosophy and sociology of science
