Understanding SGML and XML Tools Peter Flynn, 2012-12-06 Peter Flynn has been an enthusiastic and skillful contributor in the world of SGML and XML for many years and it is a pleasure to see him set some of his expertise down in writing as well The range and power of SGML tools have taken a sharp upward turn the first step leading to this was that the Web came along with HTML and showed the whole world that pointy brackets and at least somewhat descriptive markup could make a difference Soon afterward HTML claustrophobia began to grow and XML came to the rescue Since XML is fundamentally an elegant subset of SGML that reduces complexity without reducing functionality the movement to XML is great for SGML too The massive interest in XML is bringing forth a huge variety of new faster more powerful and cheaper software tools Peter has caught the cusp of this change and shows in detail how SGML and XML tools fit together into integrated solutions that return value for your investment in structured information

Text Editing, Print and the Digital World Kathryn Sutherland, Marilyn Deegan, 2016-04-01 Traditional critical editing defined by the paper and print limitations of the book is now considered by many to be inadequate for the expression and interpretation of complex works of literature At the same time digital developments are permitting us to extend the range of text objects we can reproduce and investigate critically not just books but newspapers draft manuscripts and inscriptions on stone Some exponents of the benefits of new information technologies argue that in future all editions should be produced in digital or online form By contrast others point to the fact that print after more than five hundred years of development continues to set the agenda for how we think about text even in its non print forms This important book brings together leading textual critics scholarly editors technical specialists and publishers to discuss whether and how existing paradigms for developing and using critical editions are changing to reflect the increased commitment to and assumed significance of digital tools and methodologies

Current Issues in Computational Linguistics: In Honour of Don Walker Antonio Zampolli, Nicoletta Calzolari, Martha Palmer, 1994-06-30 With this volume in honour of Don Walker *Linguistica Computazionale* continues the series of special issues dedicated to outstanding personalities who have made a significant contribution to the progress of our discipline and maintained a special collaborative relationship with our Institute in Pisa I take the liberty of quoting in this preface some of the initiatives Pisa and Don Walker have jointly promoted and developed during our collaboration because I think that they might serve to illustrate some outstanding features of Don's personality in particular his capacity for identifying areas of potential convergence

among the different scientific communities within our field and establishing concrete forms of cooperation. These initiatives also testify to his continuous and untiring work dedicated to putting people into contact and opening up communication between them, collecting and disseminating information, knowledge and resources, and creating shareable basic infrastructures needed for progress in our field. Our collaboration began within the Linguistics in Documentation group of the FID and continued in the framework of the CCL International Committee for Computational Linguistics. In 1982 this collaboration was strengthened when at CO LING in Prague I was invited by Don to join him in the organization of a series of workshops with participants of the various communities interested in the study, development and use of computational lexica.
