Hoffman,2015-11-06 This study analyzes the feasibility of guerrilla warfare as the basis for a strategy of airpower employment for a weak air force confronting an opponent with a stronger air force The analysis begins with a distillation of the theory of guerrilla warfare into five elements essential to its success superior intelligence security mobility advantage surprise and sustainment The author then compares the ground combat environment of the traditional guerrilla with the airpower environment of the potential air guerrilla and concludes that these five elements can be met in the airpower environment provided the weak force has sufficient ingenuity and the necessary resources An investigation of recent trends in technology and the prevailing strategic environment indicates that it increasingly possible for a weak force to obtain these resources The author assesses that air guerrilla warfare is a viable warfighting strategy but points out that the likelihood of a weak force actually adopting air guerrilla warfare will depend on its regional security needs and its resolve to protract a conflict The study concludes that air guerrilla warfare is a credible threat to a stronger opponent To meet this threat the author recommends that the United States re examine its intervention strategy reinforce its policy of strategic engagement and research both airpower and non airpower means to neutralize an elusive guerrilla air force Astrodynamics 1995 ,1996 *DEFCON-2* Norman Polmar,2006-01-01 The closest we ve ever come to the end of the world DEFCON 2 is the best

Streetlights and Shadows Gary A. Klein,2011-09-30 An expert explains how the conventional wisdom about decision making can get us into trouble and why experience can t be replaced by rules procedures or analytical methods In making decisions when should we go with our gut and when should we try to analyze every option When should we use our intuition and when should we rely on logic and statistics Most of us would probably agree that for important decisions we should follow certain guidelines gather as much information as possible compare the

options pin down the goals before getting started But in practice we make some of our best decisions by adapting to circumstances rather than blindly following procedures In *Streetlights and Shadows* Gary Klein debunks the conventional wisdom about how to make decisions He takes ten commonly accepted claims about decision making and shows that they are better suited for the laboratory than for life The standard advice works well when everything is clear but the tough decisions involve shadowy conditions of complexity and ambiguity Gathering masses of information for example works if the information is accurate and complete but that doesn't often happen in the real world Think about the careful risk calculations that led to the downfall of the Wall Street investment houses Klein offers more realistic ideas about how to make decisions in real life settings He provides many examples ranging from airline pilots and weather forecasters to sports announcers and Captain Jack Aubrey in Patrick O'Brian's *Master and Commander* novels to make his point All these decision makers saw things that others didn't They used their expertise to pick up cues and to discern patterns and trends We can make better decisions Klein tells us if we are prepared for complexity and ambiguity and if we will stop expecting the data to tell us everything I know of no one who combines theory and observation intellectual rigor and painstaking observation of the real world so brilliantly and gracefully as Gary Klein Malcolm Gladwell author of *Outliers* and *Blink*
