**Shakespeare, Rhetoric and Cognition**

Raphael Lyne,2011-09-01 Raphael Lyne addresses a crucial Shakespearean question why do characters in the grip of emotional crises deliver such extraordinarily beautiful and ambitious speeches How do they manage to be so inventive when they are perplexed Their dense complex articulate speeches at intensely dramatic moments are often seen as psychological they uncover and investigate inwardness character and motivation and as rhetorical they involve heightened language deploying recognisable techniques Focusing on A Midsummer Night s Dream Othello Cymbeline and the Sonnets Lyne explores both the psychological and rhetorical elements of Shakespeare s language In the light of cognitive linguistics and cognitive literary theory he shows how Renaissance rhetoric could be considered a kind of cognitive science an attempt to map out the patterns of thinking His study reveals how Shakespeare s metaphors and similes work to think interpret and resolve and how their struggle to do so results in extraordinary poetry

**Shakespeare and Complexity Theory**

Claire Hansen,2017-06-27 Shakespeare and Complexity Theory is the first book length examination into how complexity theory may be incorporated within Shakespeare studies The book demonstrates how complexity theory can illuminate our understanding of Shakespeare s texts early modern theatrical practices from dance to co authorship to stagecraft pedagogy and Shakespeare s canonical place in contemporary culture In its implementation of a scientific framework this monograph taps into an area of increasing academic and research interest the relationship between the sciences and the humanities

**Shakespeare and Science** Tom Rutter,2024-08-24 As a figurehead for the literary humanities and a dramatist whose plays feature fairies ghosts and spirits Shakespeare may not be the first author that comes to mind when thinking about science Tom Rutter shows however that in his plays and poetry Shakespeare made detailed use of the knowledge and theories of the cosmos the natural world and human biology that were available to him These range from astronomical and anatomical ideas derived from medieval scholars Islamic philosophers and ancient Greek and Roman authorities through to the challenges issued to those earlier models by more recent figures such as Copernicus and Vesalius Shakespeare s treatment of these materials was informed by the poetic and dramatic media in which he worked the dialogic nature of drama enabled an approach that could be provisional exploratory and tolerant of uncertainty and contradiction Shakespeare made the early modern playhouse a venue for the production of scientific understanding through performance illusion and the creative use of space As well as surveying current scholarship that contextualizes Shakespeare s work in relation to histories of meteorology matter theory humoral physiology racialization mathematics and more Shakespeare and Science offers detailed original readings of a variety of texts including the Histories Hamlet Antony and Cleopatra Othello King Lear The

Tempest the Sonnets and Lucrece It also makes extensive reference to works by Shakespeare's near contemporaries such as Robert Recorde William Fulke Juan Huarte and Thomas Elyot Its four chapters focus on astronomy and meteorology matter the body and mathematics Rutter's overall approach is informed by recent studies that interrogate science as a concept and that question both the boundary between literature and science and the idea of a seventeenth century scientific revolution

Susan MacDonald, 1994 In *Professional Academic Writing in the Humanities and Social Sciences* Susan Peck MacDonald tackles important and often controversial contemporary questions regarding the rhetoric of inquiry the social construction of knowledge and the professionalization of the academy MacDonald argues that the academy has devoted more effort to analyzing theory and method than to analyzing its own texts Professional texts need further attention because they not only create but are also shaped by the knowledge that is special to each discipline Her assumption is that knowledge making is the distinctive activity of the academy at the professional level for that reason it is important to examine differences in the ways the professional texts of subdisciplinary communities focus on and consolidate knowledge within their fields

Throughout the book MacDonald stresses her conviction that academics need to do a better job of explaining their text making axioms clarifying their expectations of students at all levels and monitoring their own professional practices MacDonald's proposals for both textual and sentence level analysis will help academic professionals better understand how they might improve communication within their professional communities and with their students *Shakespeare Survey*
