Handbook of Parenting Marc H. Bornstein, 2019-03-08 This highly anticipated third edition of the Handbook of Parenting brings together an array of field leading experts who have worked in different ways toward understanding the many diverse aspects of parenting Contributors to the Handbook look to the most recent research and thinking to shed light on topics every parent professional and policymaker wonders about Parenting is a perennially hot topic After all everyone who has ever lived has been parented and the vast majority of people become parents themselves No wonder bookstores house

shelves of how to parenting books and magazine racks in pharmacies and airports overflow with periodicals that feature parenting advice. However, almost none of these is evidence based. The Handbook of Parenting is Period. Each chapter has been written to be read and absorbed in a single sitting and includes historical considerations of the topic, a discussion of central issues and theory, a review of classical and modern research, and forecasts of future directions of theory and research. Together, the five volumes in the Handbook cover Children and Parenting, the Biology and Ecology of Parenting, Being and Becoming a Parent, Social Conditions and Applied Parenting, and the Practice of Parenting. Volume 2, Biology and Ecology of Parenting, relates parenting to its biological roots and sets parenting in its ecological framework. Some aspects of parenting are influenced by the organic makeup of human beings, and the chapters in Part I on the Biology of Parenting examine the evolution of parenting, the psychobiological determinants of parenting in nonhumans, and primate parenting, as well as the genetic, prenatal, neuroendocrinological, and neurobiological bases of human parenting. A deep understanding of what it means to parent also depends on the ecologies in which parenting takes place. Beyond the nuclear family, parents are embedded in influence and are themselves affected by larger social systems. The chapters in Part II on the Ecology of Parenting examine the ancient and modern histories of parenting, as well as epidemiology, neighborhoods, educational attainment, socioeconomic status, culture, and environment, to provide an overarching relational, developmental, contextual, systems perspective on parenting.

Child and Adolescent Development Anne Stevenson, 2018-04-16. Global public health has improved vastly during the past 25 years, and especially in the survival of infants and young children. However, many of these children, particularly in Africa, continue to live in poverty and in unhealthy, unsupportive environments and will not be able to meet their developmental potential. In other words, they will survive but not thrive. The UN's Sustainable Development Goals (SDGs) stress sustainable development, not just survival and disease reduction, and the Global Strategy for Women's, Children's, and Adolescents' Health proposes a 'Survive' end (preventable deaths), 'Thrive' (ensure health and wellbeing), and 'Transform' (expand enabling environments) agenda. For children to thrive, they must make good developmental progress from birth until the end of adolescence. Addressing the social determinants of developmental problems, this volume offers a broad, contextualised understanding of the factors that impact on children and adolescents in Africa. Unlike other works on the subject, it is Africa-wide in its scope, with case studies in Ethiopia, Kenya, Malawi, Nigeria, Rwanda, and South Africa. Covering mental health as well as physical and social development, it looks at policies and practice, culture, and priorities for research, identifying challenges and proposing solutions.

The Oxford Handbook of the Archaeology of Diet Julia Lee-Thorp, M. Anne Katzenberg, 2024-06-24. Humans are unique among animals for the wide diversity of foods and food preparation techniques that are intertwined with regional cultural distinctions around the world. The Oxford Handbook of the Archaeology of Diet explores evidence for human diet from our earliest ancestors through the dispersal of our species across the globe. As populations expanded, people encountered new plants and animals and learned how to exploit them for food and other

resources Today globalization aside the results manifest in a wide array of traditional cuisines based on locally available indigenous and domesticated plants and animals How did this complexity emerge When did early hominins actively incorporate animal foods into their diets and later exploit marine and freshwater resources What were the effects of reliance on domesticated grains such as maize and rice on past populations and the health of individuals How did a domesticated plant like maize move from its place of origin to the northernmost regions where it can be grown Importantly how do we discover this information and what can be deduced about human health biology and cultural practices in the past and present Such questions are explored in thirty three chapters written by leading researchers in the study of human dietary adaptations The approaches encompass everything from information gleaned from comparisons with our nearest primate relatives tools used in procuring and preparing foods skeletal remains chemical or genetic indicators of diet and genetic variation and modern or historical ethnographic observations Examples are drawn from across the globe and information on the research methods used is embedded within each chapter The Handbook provides a comprehensive reference work for advanced undergraduate and graduate students and for professionals seeking authoritative essays on specific topics about diet in the human past

The SAGE Handbook of Social Gerontology Dale Dannefer, 2010-09-14 This volume reflects the emergence of ageing as a global concern including chapters by international scholars from Asia Australasia Europe and North America It provides a comprehensive overview of key trends and issues in the field drawing upon the full range of social science disciplines The Handbook is organized into five parts each exploring different aspects of research into social aspects of ageing Disciplinary overviews summaries of findings from key disciplinary areas within social gerontology Social relationships and social differences topics include social inequality gender and ageing the role of religion inter generational ties social networks and friendships in later life Individual characteristics and change in later life chapters in this section examine different aspects of individual aging including self and identity cognitive processes and biosocial interactions and their impact on physical and psychological aging Comparative perspectives and cultural innovations topics in this section include ageing and development ageing in a global context migration and cross cultural perspectives on grandparenthood Policy issues The final section examines some of the main policy concerns affecting older people across the world Topics include developments in social policy long term care technology and older people end of life issues work and retirement crime and older people and the politics of old age This will be essential reading for all students researchers and policy makers concerned with the major issues influencing the lives of older people across the globe
