West, 2012-12-06 There is hardly any field of human endeavour which is more fundamental than the study of our surroundings We have always wanted to learn what was behind our horizon beyond the next mountain on the other side of the ocean on the next planet at the end of the Universe We have come a long way since our early ancestors gazed upon the sky in amazement Giant optical and radio telescopes now allow us to see the early epochs of the Universe revealing phenomena beyond our comprehension Spacecrafts with on board astronomical instrumentation circle the Earth and fly to the limits of the Solar System providing invaluable new information

about nearby and distant objects Many people have the intuitive feeling that it is easier and better to study the Universe from above the Earth's atmosphere However this is only partially true in as much as electromagnetic radiation of certain wavelengths e.g X rays does not penetrate the atmosphere and can only be studied from balloons and space crafts The advent of space borne astronomy has not made ground based observations obsolete on the contrary it is only thanks to the combination of the two that we have now a vastly more comprehensive picture of the Universe than just a few decades ago
