being variously constrained by well formedness conditions on the encoding of information structure primarily derive from the tension between accusative syntactic and active semantic alignment In contrast to approaches which consider the selection of the perfective operator to be the primary diagnostic of unaccusative or unergative syntax this study identifies two morphosemantic domains in intransitive constructions on the basis of the analysis of a cluster of related phenomena including agreement argument suppression ne cliticization past participle behaviour the morphosyntax of experiencer predicates and word order as well as the selection of the perfective operator Analysing the degree to which semantic syntactic and discourse factors interact in determining each manifestation of split intransitivity this work captures successfully the mismatches in the scope of the various diagnostics Drawing upon insights provided by Role and Reference Grammar and relying on corpus based evidence and crossdialectal comparison this study makes new empirical and theoretical contributions to the debate on split intransitivity The book is accessible to linguists of all theoretical persuasions and will make stimulating reading for researchers and scholars in Italian and Romance linguistics typology and theoretical linguistics
