Lucien Kroll Buildings And Projects:

Buildings and Projects Lucien Kroll, 1987 **Lucien Kroll : Buildings and projects** Lucien Kroll, 1988 *Lucien Kroll* Lucien Kroll, 1988 **The Architecture of Complexity** Lucien Kroll, 1986 The Belgian architect Lucien Kroll is known internationally for his iconoclastic way of making architecture his complex and idiosyncratic forms delight some enrage others and intrigue many His medical faculty buildings for the University of Louvain outside of Brussels aroused widespread controversy in the early 1970s their fragmented and improvisational appearance the result of a deliberate participatory design process in stark contrast to the adjacent massive and repetitive hospital the embodiment of a centralized bureaucracy In *An Architecture of Complexity* Kroll describes his working method and the theory that informs it with reference to and illustrations of actual building projects over a period of twenty years During this time while harboring no love of technology itself Kroll has made a long and detailed study of system building and has experimented with industrialized building methods and computer aided design Here he shows how rich the potential can be when these advanced techniques can be employed to create variety and complexity In plain intelligent professional talk Kroll discusses the problems he wrestles with and explains how his architecture is done Unlike most of the proponents of soft architecture Kroll shows how standardized industrialized components and more recently use of the computer can yield highly customized buildings and spaces that are less expensive than handcrafted buildings He also investigates the role that architects have among other specialists and criticizes the militaristic approach to modernist architecture and the postmodernist use of history as a catalog of forms for stylistic purposes The translator Peter Blundell Jones is an architect lecturer and frequent contributor to architectural journals **Residential Open Building** Stephen H. Kendall, Jonathan Teicher, 2010-04-29 Residential Open Building the result of a CIB Task Group Open Building Implementation provides a state of the art review of open building fundamental principles recent developments and international coverage of current projects on both the public and private arena Open Building is a highly flexible and economical method of building which has far reaching advantages for urban designers architects contractors developers and end users **Modern Architecture Through Case Studies 1945 to 1990** Peter Blundell Jones, Eamonn Canniffe, 2012-08-21 Once again new interpretations are presented of some of the most famous architecture of the period Work by lesser known architects whose influence and role have been overlooked by conventional histories of the subject is discussed The case study structure allows each example to be discussed and used as a springboard to explore different theoretical approaches Filled with beautiful photographs plans and architect's drawings this is a clear and accessible discussion on a period of architecture that engages many questions still under debate in architecture today *Design Ethics beyond Duty and Virtue* Philippe d'Anjou, 2017-06-20 Freedom is compelling in design it has to be acknowledged accepted and comprehended in all its existential complexity to better understand and engage the intricate ethical domain of design practice The book addresses that issue by thoroughly examining design ethics and design in general

within an existentialist philosophical framework Its inquiry reveals a puzzling and unsettling reality of design ethics and hence what constitutes an ethical design practice where there is no exit for designers but complete acceptance of their freedom and responsibility This book makes a unique original and invaluable contribution to the design literature and design ethics scholarship Scholars professors students and professionals in all design disciplines as well as any person involved in arts humanities philosophy social sciences and engineering will find philosophical insights that will challenge design thinking and inspire them to rethink design ethics as an agency of human existence making instead of code compliance Making a case for existentialist design ethics this book lays the ground for a radical transformation of how we conceive design ethics in design practice and the role of designers in the world Space, Difference, Everyday Life Kanishka Goonewardena, Stefan Kipfer, Richard Milgrom, Christian Schmid, 2008-02-19 This book merges two schools of thought one that is political economic and the other more culturally oriented into a unified Lefebvrian approach to contemporary urban issues and the nature of our spatialized social structures **Architecture as a Global System** Peter Raisbeck, 2019-11-08 This book provides a clear sighted analysis which suggests that architectural design may yet shape and order the future of cities A clear argument that emerges is that to retain their future agency architects must understand the contours and ecologies of practice that constitute the global system of architectural production **The Structure of the Ordinary** N. J. Habraken, 2000-08-25 The influential Dutch architect s long awaited manifesto on the everyday environment as the first and best ground for establishing the significance and coherence of architecture According to N J Habraken intimate and unceasing interaction between people and the forms they inhabit uniquely defines built environment The Structure of the Ordinary the culmination of decades of environmental observation and design research is a recognition and analysis of everyday environment as the wellspring of urban design and formal architecture The author s central argument is that built environment is universally organized by the Orders of Form Place and Understanding These three fundamental interwoven principles correspond roughly to physical biological and social domains Historically ordinary environment was the background against which architects built the extraordinary Drawing upon extensive examples from archaeological and contemporary sites worldwide the author illustrates profound recent shifts in the structure of everyday environment One effect of these transformations Habraken argues has been the loss of implicit common understanding that previously enabled architects to formally enhance and innovate while still maintaining environmental coherence Consequently architects must now undertake a study of the ordinary as the fertile common ground in which form and place making are rooted In focusing on built environment as an autonomous entity distinct from the societies and natural environments that jointly create it this book lays the foundation for a new dialogue on methodology and pedagogy in support of a more informed approach to professional intervention Precedented Environmental Futures Colin Porteous, 2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing

feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment **Lucien Kroll; buildings and projects** ,1987 **The Oxford**

Dictionary of Architecture James Stevens Curl,Susan Wilson,2015-02-26 Containing over 6 000 entries from Aalto to Zwinger and written in a clear and concise style this authoritative dictionary covers architectural history in detail from ancient times to the present day It also includes concise biographies of hundreds of architects from history excluding living persons from Sir Francis Bacon and Imhotep to Liang Ssu ch eng and Francis Inigo Thomas The text is complemented by over 260 beautiful and meticulous line drawings labelled cross sections and diagrams These include precise drawings of typical building features making it easy for readers to identify particular period styles This third edition of The Oxford Dictionary of Architecture has been extensively revised and expanded with over 900 new entries including hundreds of definitions of garden and landscape terms such as Baroque garden floral clock hortus conclusus and Zen garden design Each entry is followed by a mini bibliography with suggestions for further reading The full bibliography to the first edition previously only available online has also been fully updated and expanded and incorporated into this new edition This is an essential work of reference for anyone with an interest in architectural and garden history With clear descriptions providing in depth analysis it is invaluable for students professional architects art historians and anyone interested in architecture and garden design and provides a fascinating wealth of information for the general reader Physical Space and Spatiality in Muslim Societies Mahbub Rashid,2021-08-10 Mahbub Rashid embarks on a fascinating journey through urban space in all of its physical and social aspects using the theories of Foucault Bourdieu Lefebvre and others to explore how consumer capitalism colonialism and power disparity consciously shape cities Using two Muslim cities as case studies Algiers Ottoman French and Zanzibar Ottoman British Rashid shows how Western perceptions can only view Muslim cities through the lens of colonization a lens that distorts both physical and social space Is it possible he asks to find a useable urban past in a timeline broken by colonization He concludes that political economy may be less relevant in premodern cities that local variation is central to the understanding of power that cities engage more actively in social reproduction than in production that the manipulation of space is the exercise of power that all urban space is a conscious construct and is therefore not inevitable and that consumer capitalism is taking over everyday life Ultimately we reconstruct a present from a fragmented past through local struggles against the homogenizing power of abstract space **The Idea of the Postmodern** Hans Bertens,2003-09-02 At last Everything you ever wanted to know about postmodernism but were afraid to ask Hans Bertens Postmodernism is the first introductory overview of postmodernism to succeed in providing a witty and accessible guide for the bemused student In clear and straightforward but always elegant prose Bertens sets out the interdisciplinary aspects the

critical debates and the key theorists of postmodernism He also explains in thoughtful and illuminating language the relationship between postmodernism and poststructuralism and that between modernism and postmodernism An enjoyable and indispensable text for today's student

The Culture of Building Howard Davis, 2006-05-12 The Culture of Building describes how the built world including the vast number of buildings that are the settings for people's everyday lives is the product of building cultures complex systems of people relationships building types techniques and habits in which design and building are anchored These cultures include builders bankers architects developers clients contractors craftspeople building inspectors planners and many others The product of these cultures which operate building after building is the built world of cities and settlements In this book Howard Davis uses historical contemporary and cross cultural examples to describe the nature and influence of these cultures He shows how building cultures reflect the general cultures in which they exist how they have changed over history how they affect the form of buildings and cities and how present building cultures which are responsible for the contemporary everyday environments may be improved Following the development of the idea of building cultures using several historical examples the book lays out a framework that puts such topics as craft and professionalism the vernacular and nonvernacular and design and construction in common frameworks Although the book ranges widely over different cultures and historical periods it emphasizes the transformations that took place in architecture and building practice from the late eighteenth century to the present Finally the book uses a series of contemporary examples that demonstrate the building culture as a living concept These examples which include built work as well as innovative processes that go beyond the work of architects alone are described as the seeds that can help the emergence of a better built world This beautiful book features over 260 color and black and white illustrations most from the author's extensive collection of slides and includes photographs prints and drawings from historical archives and contemporary architectural offices

Actions of Architecture Jonathan Hill, 2003-09-02 Actions of Architecture begins with a critique of strategies that define the user as passive and predictable such as contemplation and functionalism Subsequently it considers how an awareness of user creativity informs architecture architects

Green Urbanism Timothy Beatley, 2012-09-26 As the need to confront unplanned growth increases planners policymakers and citizens are scrambling for practical tools and examples of successful and workable approaches Growth management initiatives are underway in the U S at all levels but many American success stories provide only one piece of the puzzle To find examples of a holistic approach to dealing with sprawl one must turn to models outside of the United States In Green Urbanism Timothy Beatley explains what planners and local officials in the United States can learn from the sustainable city movement in Europe The book draws from the extensive European experience examining the progress and policies of twenty five of the most innovative cities in eleven European countries which Beatley researched and observed in depth during a year long stay in the Netherlands Chapters examine the sustainable cities movement in Europe examples and ideas of different housing and living options transit

systems and policies for promoting transit use increasing bicycle use and minimizing the role of the automobile creative ways of incorporating greenness into cities ways of readjusting urban metabolism so that waste flows become circular programs to promote more sustainable forms of economic development sustainable building and sustainable design measures and features renewable energy initiatives and local efforts to promote solar energy ways of greening the many decisions of local government including ecological budgeting green accounting and other city management tools Throughout Beatley focuses on the key lessons from these cities including Vienna Helsinki Copenhagen Stockholm Zurich Amsterdam London and Berlin and what their experience can teach us about effectively and creatively promoting sustainable development in the United States Green Urbanism is the first full length book to describe urban sustainability in European cities and provides concrete examples and detailed discussions of innovative and practical sustainable planning ideas It will be a useful reference and source of ideas for urban and regional planners state and local officials policymakers students of planning and geography and anyone concerned with how cities can become more livable

Sustainable Architecture and Urbanism Dominique Gauzin-Müller, 2002-07-01 Since the mid 1980s and in particular the 1992 environmental summit in Rio de Janeiro sustainability has become a global issue and the subject of international debate In the context of architecture sustainability implies the use of intelligent technology innovative construction methods ecologically friendly materials and use of environmentally friendly energy resources This book begins with an overview of the various approaches and developments in sustainable architecture followed by an in depth section on urbanism looking at several European towns In the third section the technologies materials and methods of ecological architecture are examined Concluding the volume are 23 sophisticated and innovative European case studies The author and architect Dominique Gauzin Müller has specialised on energy and environmental issues and ecological architecture for over 15 years
