

## AP Macroeconomics Unit 3 Review Session

### Aggregate Demand-Aggregate Supply Model and Long-Run Macroeconomic Equilibrium

1. Draw an AD-AS graph showing long-run macroeconomic equilibrium. Label AD, SRAS, LRAS, potential output, equilibrium aggregate price level, and output.

2. Consider an economy in long-run equilibrium. Draw a graph of the AD-AS model to show the effect of each of the following (ceteris paribus) changes.

- a. The economy's central bank decreases the money supply. **Interest rates increase, therefore, investment spending increases (negative demand shock)**

- i. What happens to the aggregate output and price level?  **$Y \downarrow$ ,  $PL \uparrow$**
- ii. Does this economy face a short-run recessionary gap or an inflationary gap? **recessionary**
- iii. What active stabilization policy can offset this particular shock? **Expansionary monetary or fiscal policy**
- iv. What would happen in the long run to the aggregate price and output levels without an active stabilization policy? **Nominal wages become flexible and fall, SRAS shifts to the right, output  $\uparrow$  to potential output**

- b. Productivity decreases in the economy. **(negative supply shock)**

- i. What happens to the aggregate output and price level?  **$PL \uparrow$ ,  $Y \downarrow$**
- ii. Does this economy face a short-run recessionary gap or an inflationary gap? **Recessionary gap**
- iii. What active stabilization policy can offset this particular shock? **Contractionary monetary policy/ expansionary fiscal policy (must hit inflation first)**
