Macromolecular Syntheses 011:

Macromolecular Syntheses Charles Gilbert Overberger, 1992 *The Bacterial Cell: Coupling between Growth, Nucleoid Replication, Cell Division and Shape* Arie Zaritsky, Conrad L. Woldringh, Jaan Männik, 2016-05-02 Bacterial Physiology was inaugurated as a discipline by the seminal research of Maal e Schaechter and Kjeldgaard published in 1958 Their work clarified the relationship between cell composition and growth rate and led to unravel the temporal coupling between chromosome replication and the subsequent cell division by Helmstetter et al a decade later Now after half a century this field has become a major research direction that attracts interest of many scientists from different disciplines The outstanding question how the most basic cellular processes mass growth chromosome replication and cell division are inter coordinated in both space and time is still unresolved at the molecular level Several particularly pertinent questions that are intensively studied follow a what is the primary signal to place the Z ring precisely between the two replicating and segregating nucleoids b Is this coupling related to the structure and position of the nucleoid itself c How does a bacterium determine and maintain its shape and dimensions Possible answers include gene expression based mechanisms self organization of protein assemblies and physical principles such as micro phase separations by excluded volume interactions diffusion ratchets and membrane stress or curvature The relationships between biochemical reactions and physical forces are yet to be conceived and discovered This e book discusses the above mentioned and related questions The book also serves as an important depository for state of the art technologies methods theoretical simulations and innovative ideas and hypotheses for future testing Integrating the information gained from various angles will likely help decipher how a relatively simple cell such as a bacterium incorporates its multitude of pathways and processes into a highly efficient self organized system The knowledge may be helpful in the ambition to artificially reconstruct a simple living system and to develop new antibacterial drugs *Boron Compounds Suitable for Neutron Capture Therapy for the Treatment of Cancer* , 1988 An important aspect of boron neutron capture therapy BNCT is the determination of the biological distribution of the boron within an organism at some point in time after administration of a boron containing species To that end a variety of techniques have been developed and applied to the analysis of boron These techniques include prompt gamma analysis colorimetric techniques and most recently Inductively Coupled Plasma Atomic Emission spectroscopy ICP AES techniques The synthesis of new boron compounds for BNCT and understanding the mechanisms by which existing compounds achieve tumor localization is in a very active stage of development internationally Such research programs will undoubtedly contribute to improving the possibility for a new clinical trial of this binary therapeutic system in the United States The papers presented in these proceedings present research into a wide variety of these techniques **Macromolecules: Synthesis and materials** Hans-Georg Elias, 1977 Multiscale Modeling From Macromolecules to Cell: Opportunities and Challenges of Biomolecular Simulations Valentina Tozzini, Giulia Palermo, Matteo Dal Peraro, Alexandre M. Topics covered include neurochemical and biochemical analysis of cell surface glycoconjugates, membrane skeletal organization, GPCRs, and other receptors; biophysical approaches to study membrane interactions; glycoconjugate metabolism; dysregulation; molecular mechanisms involved in cell-cell and cell-matrix interaction; glycans in infectious and neurological diseases; cancer; and glycosyltransferases as drug targets. Nanomaterial Interactions with Plant Cellular Mechanisms and Macromolecules and Agricultural Implications Jameel M. Al-Khayri, Lina M. Alnaddaf, S. Mohan Jain, 2023-01-01 This book focuses on the recent progress of nanotechnology with emphasis on the interaction between nanoparticles and plants at the cellular level. It is devoted to understanding the pathways of nanomaterials' entry into plant cells and their influence on cellular organelle processes and on crop yield. It consists of 16 chapters grouped in 3 parts: Part I Cellular mechanisms; Part II Cellular macromolecules; and Part III Implications of nanomaterials. Chapters present the plant response to nanomaterial applications, including morphological, physiochemical, and anatomical changes, and their effect on plant growth and productivity. It presents the current perspective of nanomaterials' influence on cellular processes, which include photosynthesis, photorespiration, and pigment synthesis and accumulation. In addition, it

provides current understanding of the impact of nanomaterials on cellular macromolecules including carbohydrates lipids nucleic acids proteins hormones and antioxidant defense activities Collectively these processes and biochemical compounds have implications on crop yield Chapters are written by globally recognized scientists and subjected to a rigorous review process to ensure quality presentation and scientific precision Chapter begins with an introduction that covers similar contexts and includes a detailed discussion of the topic accompanied by high quality color images diagrams and relevant details and concludes with recommendations for future study directions Chapter Impact of Nanomaterials on Plant Secondary Metabolism is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

Aquatic Animal Nutrition Christian E. W. Steinberg, 2018-09-26 This book is a unique cross fertilization of aquatic ecology and aquaculture It shows how diets structure the digestive tract and its microbiota and in turn the microbiota influences life history traits of its host including behavior Short term starvation can have beneficial effects on individuals themselves and succeeding generations which may acquire multiple stress resistances a mechanism strengthening the persistence of populations From terrestrial but not yet from aquatic animals it is understood that circadian the rhythmicity makes toxins or good food On the long term the dietary basis impacts succeeding generations and can trigger a sympatric speciation by epi genetics This volume defines gaps in nutritional research and practice of farmed fishes and invertebrates by referring to knowledge from marine and freshwater biology It also points out that dietary benefits and deficiencies have effects on several succeeding generations indicating that well designed diets may have the potential to successfully improve broodstock and breeding effort
