Synthetic Biodegradable Polymer Scaffolds Anthony Atala, David J. Mooney, 2013-11-11 This body of work represents the first volume of a book series covering the field of tissue engineering Tissue engineering which refers to a category of therapeutic or diagnostic products and processes which are based upon a combination of living cells and biomaterials was defined as a field only a few years ago 1988 Tissue engineering is an inherently interdisciplinary field combining bioengineering life sciences and clinical sciences The definition of this area of work as the field of tissue engineering brought together scientists from multiple backgrounds who already were working toward the achievement of similar goals Why a book series exclusively devoted to tissue engineering The field of tissue engineering is heterogeneous The cells involved in tissue engineering can be autologous allogeneic or xenogeneic The biomaterials utilized can be either naturally occurring synthetic or a combination of both The application of the technology can be either for acute or permanent purposes An attempt to cover the field of tissue engineering in a single volume with the degree of detail necessary for individuals with different scientific backgrounds and disciplines would be a difficult task to accomplish particularly when this field is just emerging and changing rapidly Therefore addressing different technologies within the field of tissue engineering in a comprehensive manner is the main mission of this series of volumes A stellar group of scientists has been brought together to form the editorial board of the series Unfolding the Biopolymer Landscape Viness Pillay, Yahya E. Choonara, Pradeep Kumar, 2016-01-25 The need for the development of biomaterials as scaffold for tissue regeneration is driven by the increasing demands for materials that mimic functions of extracellular matrices of body tissues Unfolding the Biopolymer Landscape provides a unique account of biopolymeric interventions inherent to biotechnological applications soft tissue engineering ophthalmic drug delivery biotextiles environmentally responsive systems neurotherapeutics and emulsions based formulations for food and pharmaceutical applications Chapters in this volume also cover biomedical applications and implications of cationic polymers collagen based substrates multifunctional polymers shape memory biopolymers hybrid semisynthetic biomaterials microbial exopolysaccharides biomaterials mimicking the extracellular microenvironment derivatized polysaccharides and metallic biomaterials Each chapter is distinctly written by experts in the respective fields

and emphasis is given on the mechanistic profile of the performance of biopolymers and biomedical applications This book provides both basic and advanced biopolymer information for scientific experts and early career researchers in the field of drug delivery tissue engineering nanomedicine food technology peptide science biomaterial design and nutrition This volume provides a unique account of biopolymeric interventions inherent to biotechnological applications soft tissue engineering ophthalmic drug delivery biotextiles environmentally responsive systems neurotherapeutics and emulsions based
