Mad Scientists In Fact And Fiction:

Mad Scientists in Fact and Fiction Melvin Berger, 1980-01-01 Discusses those scientists real and fictional who have espoused unusual theories often in conjunction with bizarre experiments *Science Fact and Science Fiction* Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings *Science Fact and Science Fiction* examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed

Collision of Realities Lars Schmeink, Astrid Böger, 2012-05-29 Even though the fantastic in its most inclusive definition has been a part of our culture for as long as it exists it has not been a prominent feature of European academic interest With its inherent transgressive moment the fantastic allows for an ideal space of the cultural negotiation of political social and physical boundaries which should place it at the center of popular cultural research not as is the case at its periphery But the commencing boom of fantastic themes in contemporary media production has facilitated a paradigmatic change in research prompting a wide interest in the fantastic in all its forms from fantasy to horror from fairy tale to science fiction This volume addresses this growing interest by reviewing the status of research on the fantastic in Europe so far and by providing a necessary outlook for the future In the essays current trends

such as the liminality debate as well as established discourses as for example on genre theory are brought together to show interested researchers a network of interdisciplinary from literary media and social studies approaches towards the fantastic

Genealogy of Popular Science Jesús Muñoz Morcillo, Caroline Y. Robertson-von Trotha, 2020-10-27 Despite the efforts of modern scholars to explain the origins of science communication as a social rhetorical and aesthetic phenomenon most researchers approach the popularization of science from the perspective of present issues thus ignoring its historical roots in classical culture along with its continuities disruptions and transformations This volume fills this research gap with a genealogically reflected introduction into the popularization of science as a recurrent cultural technique The category popular science is elucidated in interdisciplinary and diachronic dialogue discussing case studies from all historical periods Classicists archaeologists medievalists art historians sociologists and historians of science provide the first diachronic and multi layered approach to the rhetoric techniques aesthetics and societal conditions that have shaped the dissemination and reception of scientific knowledge

Junior High School Library Catalog, 1985 The Vampire in Science Fiction Film and Literature Paul Meehan, 2014-07-07 Vampires have been a popular subject for writers since their inception in 19th century Gothic literature and later became popular with filmmakers Now the classical vampire is extinct and in its place are new vampires who embrace the hi tech worlds of science fiction This book is the first to examine the history of vampires in science fiction The first part considers the role of science and pseudo science from late Victorian to modern times in the creation of the vampire as well as the sensation fiction of J Sheridan Le Fanu Bram Stoker Arthur Conan Doyle and H G Wells The second part focuses on the history of the science fiction vampire in the cinema from the silent era to the present More than sixty films are discussed including films from such acclaimed directors as Roger Corman David Cronenberg Guillermo del Toro and Steven Spielberg among others

Stars in Our Eyes Angela Ndalians, Charlotte Henry, 2002-03-30 The media star has become a powerful almost unparalleled cultural sign even as the star system has undergone radical transformation since the era of the Hollywood studio system Today's film industry continues to market and promote its products through actors in ways that seek to capture the often elusive quality that a star can embody Using contemporary stars such as Robert De Niro Keanu Reeves Arnold Schwarzenegger and Dennis Hopper this anthology of essays applies a variety of theoretical tools in its attempt to understand how we interpret stars and how we can begin to understand their cultural significance Likewise the study explores how the star system has become an increasingly complex phenomenon within society at large extending its impact beyond the cinema into music sports and fashion Many of the essays collected here consider this shift and examine how personae including the director Sam Peckinpah the royalty Princess Diana and even the digital star Lara Croft have captured the cultural imagination and have come to attain qualities as star like as those of the silver screen

OVER EXCESSIVE AMBITION AS REFLECTED IN THREE SCIENCE FICTION NOVELS: FRANKENSTEIN, SOLARIS AND

INFERNAL DEVICES KHULOD H. HUSAIN, 2021-08-05 This book attempts to explore the emergence of science fiction as a genre and its development into steampunk as a subgenre of science fiction in selected science fiction novels Mary Shelley's *Frankenstein* 1823 Stanislaw Lem's *Solaris* 1970 and K W Jeter's *Infernal Devices* 1987 This research shows that the scientists in these novels drag themselves into darkness Victor the protagonist of *Frankenstein* is an ambitious scientist who wants to conquer death but tragically loses his family during this endeavor Kelvin the hero of *Solaris* is psychologically devastated when he struggles to understand how *Solaris* ocean creates a simulation of people The hero of the third novel George Dewar's father a mad scientist and inventor creates a double of his own son as a robot tries to destroy the earth The main argument of this research is that all these novels set in different eras draw on science fiction to criticize and question man's greedy and unrestricted desire for scientific discovery to the extent that they want to conquer the universe and play the role of God The study will ask the following questions How do the ambitious scientists in the novels drag themselves into madness And how does the scientific desire turn into a crave for transcendence bringing about their damnation What do these scientific explorations and inventions reveal about human nature Does steampunk bring evolution to the future as a subgenre of science fiction **The Oxford Handbook of the Science of Science Communication** Kathleen Hall
