Leon, 2014 The armenia earthquake grinding out an effective disaster response in colombia s coffee region Resilient response and recovery at western digital after the Thai flood *Governing Access to Essential Resources* Katharina Pistor, Olivier De Schutter, 2015-12-08 Essential resources do more than satisfy people s needs They ensure a dignified existence Since the competition for essential resources particularly fresh water and arable land is increasing and standard legal institutions such as property rights and national border controls are strangling access to resources for some while delivering prosperity to others many are searching for ways to ensure their fair distribution This book argues that the division of essential resources ought to be governed by a combination of Voice and Reflexivity Voice is the ability of social groups to choose the rules by which they are governed Reflexivity is the opportunity to question one s own preferences in light of competing claims and to accommodate them in a collective learning process Having investigated the allocation of essential resources in places as varied as Cambodia China India Kenya Laos Morocco Nepal the arid American West and peri urban areas in West Africa the contributors to this volume

largely concur with the viability of this policy and normative framework Drawing on their expertise in law environmental studies anthropology history political science and economics they weigh the potential of Voice and Reflexivity against such alternatives as pricing mechanisms property rights common resource management political might or brute force

Population Matters Nancy Birdsall, Allen C. Kelley, Steven W. Sinding, 2001 The effect of demography on economic performance has been the subject of intense debate in economics for nearly two centuries In recent years opinion has swung between the Malthusian views of Coale and Hoover and the cornucopian views of Julian Simon Unfortunately until recently data were too weak and analytical models too limited to provide clear insights into the relationship As a result economists as a group have not been clear or conclusive This volume which is based on a collection of papers that heavily rely on data from the 1980s and 1990s and on new analytical approaches sheds important new light on demographic economic relationships and it provides clearer policy conclusions than any recent work on the subject In particular evidence from developing countries throughout the world shows a pattern in recent decades that was not evident earlier countries with higher rates of population growth have tended to see less economic growth An analysis of the role of demography in the Asian economic miracle strongly suggests that changes in age structures resulting from declining fertility create a one time demographic gift or window of opportunity when the working age population has relatively few dependants of either young or old age to support Countries which recognize and seize on this opportunity can as the Asian tigers did realize healthy bursts in economic output But such results are by no means assured only for countries with otherwise sound economic policies will the window of opportunity yield such dramatic results Finally several of the studies demonstrate the likelihood of a causal relationship between high fertility and poverty While the direction of causality is not always clear and very likely is reciprocal poverty contributes to high fertility and high fertility reinforces poverty the studies support the view that lower fertility at the country level helps create a path out of poverty for many families Population Matters represents an important further step in our understanding of the contribution of population change to economic performance As such it will be a useful volume for policymakers both in developing countries and in international development agencies
