On Ideas:

On Ideas Gail Fine, 1993-04-29 The *Peri ideon* *On Ideas* is the only work in which Aristotle systematically sets out and criticizes arguments for the existence of Platonic forms Gail Fine presents the first full length treatment in English of this important but neglected work She asks how and how well and why and with what justification he favours an alternative metaphysical scheme She also examines the significance of the *Peri ideon* for some central questions about Plato's theory of forms whether for example there are forms corresponding to every property or only to some then to which ones whether forms are universals particulars or both and whether they are meanings properties or both In addition to discussing the *Peri ideon* and its sources in Plato's dialogues Fine also provides a general discussion of Plato's theory of forms and of our evidence about the date scope and aims of the *Peri ideon* While she pays careful attention to the details of the text she also relates the issues to current philosophical concerns The book will be valuable for anyone interested in metaphysics ancient or modern

On Ideas Pappas, Nicholas J., 2020-05-01 Know yourself that's great advice but how do we get there In a lively conversation about the meaning of life three characters explore a wide range of concepts including friendship and love self discipline and self respect trust and justice

Betting on Ideas Reuven Brenner, 1989-07-10 In this book Reuven Brenner argues that people bet on new ideas and are more willing to take risks when they have been outdone by their fellows on local national or international scales Such bets mean that people deviate from the beaten path and either gamble commit crimes or come up with new ideas in art business or politics and ideas concerning war and peace in particular By using evidence on gambling crime and creativity now and during the Industrial Revolution by examining innovations in English and French inheritance laws and the emergence of welfare legislation and by looking at what has happened before and after wars Brenner reaches the conclusion that hope and fear envy and vanity sentiments provoked when being leapfrogged make humans race

Return on Ideas David Nichols, 2008-05-23 *Return on Ideas* is a practical guide to getting more from the resources you put into your innovation process David Nichols clearly shows why current innovation funnel models stifle rather than encourage new ideas and offers a new methodology rocketing to tackle the problem The first book to look in detail at innovation as a business driving imperative *Return on Ideas* provides the tools techniques and processes to actually upgrade the way you tackle innovation illustrated with examples from innovative companies such as Yo Sushi Apple Vodafone Unilever P G Danone Amex and Ben Jerry's as well as unconventional sources such as theatre and comedy

Descartes on Innate Ideas Deborah A. Boyle, 2009-05-28 The concept of innateness is central to Descartes epistemology the *Meditations* display a new non Aristotelian method of acquiring knowledge by attending properly to our innate ideas Yet understanding Descartes's conception of innate ideas is not an easy task and some commentators have concluded that Descartes held several distinct and unrelated conceptions of innateness In *Descartes on Innate Ideas* however Deborah Boyle argues that Descartes's remarks on innate ideas in fact form a unified account Addressing the further question of how Descartes thinks

innate ideas are known the author shows that for Descartes thinkers have implicit knowledge of their innate ideas Thus she shows that the actual perception of these innate ideas is for Descartes a matter of making them explicit turning the intellect away from sense perceptions and towards pure thought The author also provides a new interpretation of the Cartesian natural light an important mental faculty in Descartes epistemology [A Certain Idea of Europe](#) Craig Parsons,2018-07-05

The quasi federal European Union stands out as the major exception in the thinly institutionalized world of international politics Something has led Europeans and only Europeans beyond the nation state to a fundamentally new political architecture Craig Parsons argues in *A Certain Idea of Europe* that this something was a particular set of ideas generated in Western Europe after the Second World War In Parsons s view today s European Union reflects the ideological and perhaps visionary project of an elite minority His book traces the progressive victory of this project in France where the battle over European institutions erupted most divisively Drawing on archival research and extensive interviews with French policymakers the author carefully traces a fifty year conflict between radically different European plans Only through aggressive leadership did the advocates of a supranational community Europe succeed at building the EU and binding their opponents within it Parsons puts the causal impact of ideas and their binding effects through institutions at the center of his book In so doing he presents a strong logic of social construction a sharp departure from other accounts of EU history that downplay the role of ideas and ideology **Berkeley on Abstraction and Abstract Ideas** Willis Doney,2019-04-24

Berkeley s critique of abstract ideas in the Introduction to Principles of Human Knowledge has provoked a great deal of commentary of various sorts This anthology first published in 1989 presents a selection of historically important and philosophically interesting discussions on Berkeley s theories **The Cambridge History of Eighteenth-century**

Philosophy Knud Haakonssen,2006 This two volume set presents a comprehensive and up to date history of eighteenth century philosophy The subject is treated systematically by topic not by individual thinker school or movement thus enabling a much more historically nuanced picture of the period to be painted [Insights from Book Translations on the International Diffusion of Knowledge](#) Isabelle Yin Fong Sin,2011 Increases in the stock of ideas possessed by societies are central to modern economic growth The implications of idea flows are striking Klenow and Rodriguez Clare 2005 estimate world production would be just 6% of its current level if countries did not share ideas Yet although theoretical economists have studied ideas and their diffusion extensively empirical studies are scarce because ideas are inherently difficult to measure Previous empirical studies of idea flows have tended to use proxies such as trade flows foreign direct investment migration and patent citations However with the exception of the latter these measures are not pure idea flows and do not capture the key properties of ideas namely non rivalry and disembodiedness My research proposes a novel measure of idea flows namely book translations and uses it to study the factors that affect the international diffusion of ideas Book translations are an attractive way to quantify idea flows because they are both non rival and disembodied they are a pure measure of idea flows

rather than a by product of a process such as trade or migration and their key purpose is to make the ideas contained in the book accessible to speakers of another language In chapter 2 I outline the economics literature on ideas and their diffusion I motivate and discuss book translations as a measure of idea flows and provide a framework for thinking about when translations are likely to occur I describe the translation data in chapter 3 The source of the data is an international bibliography of translations collected by the United Nations Educational Scientific and Cultural Organization From this bibliography I compile a data set of over 2 million translations published in 80 countries since the 1949 including detailed information on each title translated I then document the main patterns of translation flows In chapter 4 I employ a gravity framework to study how distance affects translation flows between countries This sheds light both on the barriers to international idea diffusion and on the underlying causes of the negative relationship between distance and trade Translations differ from trade in that they have zero transportation costs but they are subject to similar search and information costs and costs of forming contracts I estimate a gravity model where bilateral translation flows vary with the sizes of the countries and the distance between them and find the elasticity of translations with respect to distance to be between 0.3 and 0.5 for the 1990s these values are significantly smaller than the equivalent elasticity for trade found in the literature suggesting a significant role for transportation costs in the distance effect on trade In addition I present several pieces of evidence that suggest supply side frictions play a larger role in the distance effect on translations than do consumer preferences For instance the speed with which titles are translated which is likely to largely capture supply frictions as opposed to demand factors decreases significantly with distance Finally in joint work with Ran Abramitzky chapter 5 I study how the collapse of the Communist regime in Eastern Europe at the close of the 1980s affected the international diffusion of ideas We show that while translations between Communist languages decreased by two thirds with the collapse Western to Communist translations increased by a factor of seven and reached Western levels Convergence was full in economically beneficial fields such as sciences and only partial in culturally beneficial fields such as history The effects were larger for more Western oriented countries These findings help us understand how institutions shape the international diffusion of knowledge and demonstrate the importance of preferences in determining the type of ideas that diffuse into a country
