How Organizations Function and How to Impact Them**, 2021-11-23 Master's Thesis from the year 2020 in the subject Business economics Business Management Corporate Governance grade 1 Otto Beisheim School of Management Vallendar Kellogg WHU Executive MBA language English abstract
Despite innovations in management science leaders struggle to adapt their organizations against rapid environmental changes Based on the assumption that this struggle results from obsolete management paradigms this work aims to outline a systemic view of organizations and groups as well as approaches to manage and change them This work adopts a fundamental question What dynamics evolve in organizations and groups or teams as a significant part of organizations that increase or decrease management's influence and the organizations or groups ability to induce change This work delivers a systematic approach to equip readers with analytical tools to arrive at their own understanding of a wide range of different organizations or groups This literature based work describes causal and systemic theories to explain human behavior based on an analysis of organizations based on systems theory Looking through different lenses provides insights into organizations underlying structures namely the machine game or fa ade metaphors Formal and informal structures and their interactions have been analyzed in different lifecycle stages immobility and replaceability The construction of a systemic view of groups shows group specific dynamics and behavioral patterns The specialization in groups drives local best practices expected

informal behavior and a narrowed perspective of what is essential for the department or organization. These local rationalities are critical to leading groups or organizations. The explanations of groups and organizations clarify that a hierarchical understanding or an understanding that an organization or even its culture can be rationally planned is misleading. Organizations continually adjust to changing conditions in their environment but unfortunately not as their executives intend. Therefore the change of organizations or groups is hypothesis driven experimentation that integrates the change of the change from the beginning. Systemic interventions are based on observations and do not claim predictability. The manager's primary tasks are to develop team reflexivity and autonomous decision making as well as increase variation and promote selections in the group or organization. Incremental approaches to management group reflection and development and lateral and formal mechanisms of influence must be utilized in combination with a comprehensive organizational analysis.

The Oxford Handbook of Sexual Conflict in Humans Todd K. Shackelford, Aaron T. Goetz, 2012-01-04 Sexual conflict, what happens when the reproductive interests of males and females diverge, occurs in all sexually reproducing species including humans. The Oxford Handbook of Sexual Conflict in Humans is the first volume to assemble the latest theoretical and empirical work on sexual conflict in humans from the leading scholars in the fields of evolutionary psychology and anthropology. Following an introductory section that outlines theory and research on sexual conflict in humans and non-humans, ensuing sections discuss human sexual conflict and its manifestations before and during mating. Chapters in these sections address a range of factors, topics, and factors including sexual coercion, jealousy, and partner violence and killing. The ovulatory cycle, female orgasm, and sperm competition. Chemical warfare between ejaculates and female reproductive tracts. Chapters in the next section address issues of sexual conflict after the birth of a child. These chapters address sexual conflict as a function of the local sex ratio, men's functional if unconscious concern with paternal resemblance to a child, men's reluctance to pay child support, and mate expulsion as a tactic to end a relationship. The handbook's concluding section includes a chapter that considers the impact of sexual conflict on a grander scale, notably on cultural, political, and religious systems. Addressing sexual conflict at its molecular and macroscopic levels. The Oxford Handbook of Sexual Conflict in Humans is a fascinating resource for the study of intersexual behavior.

Introduction to Human-Animal Interaction Laëtitia Maréchal, Emile Zee, 2024-01-29 Introduction to Human-Animal Interaction focuses on the human dimension of interacting with other animals. This book introduces recent developments, theories, and debates in the relatively new research area of Human-Animal Interaction (HAI) and focuses on the social and life sciences aspect of these interactions. Experts from different academic disciplines provide an overview for students and professionals interested in how humans and other animals interact and what advantages and disadvantages emerge for both parties in this relationship. The book starts with the theories and mechanisms supporting our interactions with animals, such as human-animal communication, and it then covers the implications of HAI in terms of ethics and welfare. After discussing cultural differences and forensic aspects in human

animal interaction e.g. wildlife crime and animal abuse the book examines evidence in the area of animal assisted intervention. The final chapters give an overview of current research in specific human animal interaction systems: human pet, human livestock and human wildlife interaction. The book offers a scientific evidence based perspective on human animal interaction providing pedagogical tools to make a systematic critical and constructive evaluation of research in HAI possible. It offers a range of in text pedagogical features like a subject index, chapter MCQs, open questions, further reading and additional digital resources including videos which are accessible via QR codes or through the associated website. This textbook provides the fundamental tools for achieving a comprehensive current and critical overview of the HAI field and is an integral text for undergraduate and postgraduate students undertaking modules in human animal interaction in social sciences such as anthropology, cultural studies, criminology, ethics and laws or in life sciences such as animal behaviour, conservation and welfare, biology, neuroscience, physiology, psychology, public health and those studying veterinary science. **U.S.**
