Long Term Durability Of Structural Materials:

Long Term Durability of Structural Materials P.J.M. Monteiro,K.P. Chong,J. Larsen-Basse,K. Komvopoulos,2001-08-29 Long Term Durability of Structural Materials features proceedings of the workshop held at Berkeley CA in October 2000 It brought together engineers and scientists who have received grants from the initiative NSF 98 42 to share their results on the study of long term durability of materials and structures The major objective was to develop new methods for accelerated short term laboratory or in situ tests which allow accurate reliable predictions of the long term performance of materials machines and structures To achieve this goal it was important to understand the fundamental nature of the deterioration and damage processes in materials and to develop innovative ways to model the behavior of these processes as they affect the life and long term performance of components machines and structures The researchers discussed their approach to include size effects in scaling up from laboratory specimens to actual structures Accelerated testing and durability modeling techniques developed were validated by comparing their results with performance under actual operating conditions The main mechanism of the deterioration discussed included environmental effects and or exposure to loads speeds and other operating conditions that are not fully anticipated in the original design A broad range of deterioration damage such as fatigue overload ultraviolet damage corrosion and wear was presented A broad range of materials of interest was also discussed including the full spectrum of construction materials metals ceramics polymers composites and coatings Emphasis was placed on scale dependence and history of fabrication on resulting mechanical behavior of materials **Durability of Building Materials and Components** International Conference on Building Materials and Components,1980 **Second International Conference on Durability of Building Materials and Components, September 14-16, 1981** ,1981

understanding of the many possibilities for the development of a more sustainable structural concrete thereby fostering resilient and sustainable construction practices to support the global commitment to environmental responsibility

Environment-Friendly Construction Materials Shaopeng Wu, Inge Hoff, Serji Amirkhanian, Yue Xiao, 2019-06-20 Construction materials are the most widely used materials for civil infrastructure in our daily lives. However, from an environmental point of view, they consume a huge amount of natural resources and generate the majority of greenhouse gases. Therefore, many new and novel technologies for designing environmentally friendly construction materials have been developed recently. This Special Issue, Environment-Friendly Construction Materials, has been proposed and organized as a means to present recent developments in the field of construction materials. It covers a wide range of selected topics on construction materials.

High-performance Construction Materials Caijun Shi, 2008 This book describes a number of high performance construction materials including concrete, steel fiber reinforced cement, fiber reinforced plastics, polymeric materials, geosynthetics, masonry materials, and coatings. It discusses the scientific bases for the manufacture and use of these high performance materials. Testing and application examples are also included, in particular the application of relatively new high performance construction materials to design practice. Most books dealing with construction materials typically address traditional materials only, rather than high performance materials, and as a consequence do not satisfy the increasing demands of today's society. On the other hand, books dealing with materials science are not engineering oriented, with limited coverage of the application to engineering practice. This book is thus unique in reflecting the great advances made on high performance construction materials in recent years. This book is appropriate for use as a textbook for courses in engineering materials, structural materials, and civil engineering materials at the senior undergraduate and graduate levels. It is also suitable for use by practice engineers, including construction materials, mechanical, and civil engineers.
