FPGA Design Automation Deming Chen, Jason Cong, Peichen Pan, 2006 FPGA Design Automation A Survey is an up to date comprehensive survey tutorial of FPGA design automation with an emphasis on the recent developments within the past 5 to 10 years The focus is on the theory and techniques that have been or most likely will be reduced to practice It covers all major steps in FPGA design flow routing and placement circuit clustering technology mapping and architecture specific optimization physical synthesis RT level and behavior level synthesis and power optimization FPGA Design

Automation A Survey can be used as both a guide for beginners who are embarking on research in this relatively young yet exciting area and a useful reference for established researchers in this field

Design of Interconnection Networks for Programmable Logic Guy Lemieux, David Lewis, 2013-06-29 Programmable Logic Devices PLDs have become the key implementation medium for the vast majority of digital circuits designed today While the highest volume devices are still built with full fabrication rather than field programmability the trend towards ever fewer ASICs and more FPGAs is clear This makes the field of PLD architecture ever more important as there is stronger demand for faster smaller cheaper and lower power programmable logic PLDs are 90% routing and 10% logic This book focuses on that 90% that is the programmable routing the manner in which the programmable wires are connected and the circuit design of the programmable switches themselves Anyone seeking to understand the design of an FPGA needs to become literate in the complexities of programmable routing architecture This book builds on the state of the art of programmable interconnect by providing new methods of investigating and measuring interconnect structures as well as new programmable switch basic circuits The early portion of this book provides an excellent survey of interconnection structures and circuits as they exist today Lemieux and Lewis then provide a new way to design sparse crossbars as they are used in PLDs and show that the method works with an empirical validation This is one of a few routing architecture works that employ analytical methods to deal with the routing architecture design The analysis permits interesting insights not typically possible with the standard empirical approach
