

GLYCEMIC INDEX FOODS LIST

The glycemic index (GI) is a scale ranging from 0 to 100 that ranks carbohydrate-containing foods based on their impact on blood sugar levels. Foods with a high GI are quickly digested and cause a rapid rise in blood sugar, while those with a low GI are digested more slowly, resulting in a gradual and moderate increase in blood sugar. The GI is commonly used in managing blood sugar levels for individuals with diabetes, as low GI foods can help control blood glucose and provide sustained energy. However, it's important to consider other factors such as nutrient content, fiber, and overall dietary balance when making food choices.
