MMESE primarily focuses on the relationship between man machine and environment, studying the optimum combination of man machine environment systems where man refers to people in the workplace e.g. operators, decision makers; machine is the general name for any object controlled by man including tools, machinery, computers, systems and technologies; and environment describes the specific working conditions under which man and machine interact e.g. temperature, noise, vibration and hazardous gases. The three goals of optimizing such systems are ensuring safety, efficiency and economy. Presenting interdisciplinary studies on the concepts and methods in physiology, psychology, system engineering, computer science, environmental science, management, education and other related disciplines, this book is a valuable resource for all researchers and professionals whose work involves MMESE subjects." **The Rise of a New Hero** Adrian McGinnis, 2010-10
