Luke Dormehl, 2017-03-07 A fascinating look at Artificial Intelligence from its humble Cold War beginnings to the dazzling future that is just around the corner When most of us think about Artificial Intelligence our minds go straight to cyborgs robots and sci fi thrillers where machines take over the world But the truth is that Artificial Intelligence is already among us It exists in our smartphones fitness trackers and refrigerators that tell us when the milk will expire In some ways the future people dreamed of at the World's Fair in the 1960s is already here We're teaching our machines how to think like humans and they're learning at an incredible rate In *Thinking Machines* technology journalist Luke Dormehl takes you through the history of AI and how it makes up the foundations of the machines that think for us today Furthermore Dormehl speculates on the incredible and possibly terrifying future that's much closer than many would imagine This remarkable book will invite you to marvel at what now seems commonplace and to dream about a future in which the scope of humanity may need to broaden itself to include intelligent machines **Machines That Think!**

Turing's treatment of the question Can machines think and his controversial distinction between program receptive and program resistant aspects of the mind This edition's postscript includes further reflections on these themes and others and relates them to recent writings of other philosophers and computer scientists [Machine Agency](#)

James Mattingly, Beba Cibralic, 2025-02-04 An engaging exploration of agency that provides students with the critical tools needed to understand and participate in debates about future machines The great promise of artificial intelligence's evolution lives alongside an equally great anxiety As we develop increasingly autonomous machines that do things in the world questions about agency distinguishing machines that can act from those that cannot are among the thorniest we face A concise and probing exploration of agency this accessible textbook provides the critical technical and conceptual tools needed to make sense of rapid changes in what machines can do and their role in our lives James Mattingly and Beba Cibralic begin with an examination of foundational issues What is agency How does it differ from mindedness consciousness and intelligence Can we attribute agency to certain machines and if so how and why They then examine the social and ethical implications of building ever more complex machines including those concerning moral status and responsibility Drawing together ideas from philosophy and computer science as well as from information theory literature and the history of science *Machine Agency* invites students to participate thoughtfully in critical debates about future machines Provides a roadmap for interrogating the concept of machine agency suitable for philosophy majors and non majors alike Investigates the connections between developments in AI and pressing issues in analytic philosophy Explores the social and ethical impacts of computational systems with agency Features robust end of chapter exercises [Artificial Intelligence: Toward Machines that Think](#) Stanford University. machines and sees it bright with possibility As many critics decry artificial intelligence as a menace particularly to human jobs Kasparov shows how humanity can rise to new heights with the help of our most extraordinary creations rather than fear them Deep Thinking is a tightly argued case for technological progress from the man who stood at its precipice with his own career at stake

New Kind of Machine Learning-Cellular Automata Model Parimal Pal Chaudhuri, Adip Dutta, Somshubhro Pal Choudhury, Dipanwita Roy Chowdhury, Raju Hazari, 2025-04-25 This book introduces the CAML model a novel integration of Cellular Automata CA and Machine Learning ML designed to deliver efficient computation with minimal training data and low computing resources CAML operates through two key perspectives one where CA is enhanced by ML to handle complex non linear evolution and another where CA strengthens ML by leveraging linear CA evolution to process linear functions effectively The book focuses on real world applications of CA such as in Computational Biology where CAML models protein chains to predict mutations linked to human diseases using carefully designed CA rule sequences for each amino acid Another significant application is in multi language Sentiment Analysis where the model analyzes text in five languages Hindi Arabic English Greek and Georgian without relying on pre trained language models CAML uses CA rules for Unicode character modeling offering a transparent interpretable prediction algorithm Overall CAML aims to drive industrial and societal applications of CA with an emphasis on transparent results and efficient hardware design through CA s regular modular and scalable structure
